Hochschule Karlsruhe
Faculty for Computer Science and Business Information Systems
Module manual
Course of studies Media and Communication Computer Science (Bachelor), ER 2

Winter semester 2021/2022

Module Computer Science 1	
Internal number	MKIB110
Coordinator	Prof. Dr. Christian Pape
Scope	8 ECTS points, 6 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	The courses of this module teach the students fundamental programming and algorithmic skills. The students should be enabled to analyze small problems, find solutions to these problems, and develope them in the Java programming language.
Exams	Individual exams
Lecture Computer Science 1	
Internal number	MKIB111
Lecturer	Prof. Dr. Christian Pape
Scope	5 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	After attending the lecture, the students are able to solve small computer science problems with the Java programming language. They know common design methods, basic search and sort procedures, and can apply them in practice.
Recommended reading	Selected exercises with solutions, slides in PDF format, Java programs and their documentation as Javadoc. Supplementary Java exercises with solutions to deepen the programming skills.
Exams	Written Exam 120 Min. (graded)
Comments	Lecture participation. Solving simple exercises in the lecture with teacher support.
Lecture Computer Science 1 Exercise	
Internal number	MKIB112
Lecturer	Prof. Dr. Christian Pape
Scope	3 ECTS points, 2 Contact hours
Type/mode	Exercise
Language of instruction	German
Content	The students turn small computer sciences problems into practice (design, implementation with Java, testing, debugging). The students are able to create their own homepage.
Recommended reading	
Exams	Exercise 1 Semester (not graded)
Comments	Practical assignment in a computer laboratory.

Module Media Design	
Internal number	MKIB120
Coordinator	Prof. Thomas Hinz
Scope	7 ECTS points, 6 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	
Exams	Individual exams
Lecture Media Design	
Internal number	MKIB121
Lecturer	Prof. Thomas Hinz
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The students become acquainted with the theoretical foundations of media design. This includes knowledge about creativity techniques, design rules and gestalt principles, systems of organisation, micro- and macro typography, colour theory, logos/pictograms/icons as well as grid systems for layouts. Additionally, they gain insights into analog and digital photography and the conception and design of digital media content exemplified through web applications. The students explore the history of design, starting at the dawn of industrialisation and including the seminal design movements of the 19th and 20th centuries as well as contemporary trends in design. This overview enables students to categorise and evaluate different design styles, allowing an integration of the acquired knowledge into their own design processes.

Module Theoretical Computer Science	
Internal number	MKIB130
Coordinator	Prof. Dr. Heiko Körner
Scope	4 ECTS points, 4 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	Participants of this lecture will be in a position to recognize the fundamental limitations of today's computers when solving important problems. Hence, this course gives an intoduction to the basic areas of modern theoretical computer science. The Chomsky hierarchy helps the students to classify formal languages by their algorithmic complexity. Furthermore, the students use computational models (finite state automata, push-down automata) to represent today's computers and to understand their limits. Due to these limitations, several problems are shown to be unsolveable. Proving all these results requires precise mathematical and logical arguments, and the students are intensively trained to use them correctly.
Exams	Individual exams
Lecture Theoretical Computer Science	
Internal number	MKIB131
Lecturer	Prof. Dr. Heiko Körner
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	This course gives an introduction to the theory of formal languages. The Chomsky hierarchy will serve as a model to classify these languages by their computational complexity. Modern computers are represented by finite state automatons, showing theier principal limits. The students also learn how to apply several proof techniques. The lecture include the following areas of theoretical computer science: mathematical logic, formal languages, proof techniques, the O-calculus, finite automata, regular languages and expressions, the Chomsky hierarchy, the pumping lemma for regular and context-free languages and the minimization of finite automata by the theorem of Myhill-Nerode. Furthermore, the course covers pushdown automata, the CYK algorithm and closure properties of regular and context-free languages.
Recommended reading	The substance of the lecture will be discussed at the blackboard. Lecture notes containing the complete material are also available. Furthermore, there are sample solutions to all exercises. Literature: D. W. Hoffmann: Theoretische Informatik, 3. Auflage. Hanser, 2015. M. Sipser: Introduction to the Theory of Computation, 3rd edition. Cengage Learning, Inc., 2012.

Exams	Written Exam 90 Min. (graded)
Comments	This course will take place as a pure lecture. Numerous exercises deepen selected areas and will be discussed in tutorials.

Module Mathematics 1	
Internal number	MKIB140
Coordinator	Prof. Dr. Frank Schaefer
Scope	8 ECTS points, 6 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	Participants learn the mathematical basics from linear algebra, which are often used in computer science. These basics are specifially needed in computer graphics, robotic, cryptography.
Exams	Individual exams
Lecture Mathematics 1	
Internal number	MKIB141
Lecturer	Prof. Dr. Frank Schaefer
Scope	5 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The participants should learn basic knowledge of mathematics and especially of linear algebra and acquire the methods to solve smaller mathematical tasks by themselves. In the part on linear algebra we will focus on knowledge needed in computer grafic and 3D simulations. Content of the lectures: Proof methods, relations, euqivalence relations, modulo-calculation, Euklid's algorithm, functions, operations, groups, rings, fields, polynomial rings, finite fields, interpolation, vector spaces, basis, dimension, linear equations, rank, Gauß-Jordan-algorithm, determinant, matrices, linear map, inverse matrices, rotation, translation, scaling, scalarproduct, norm, vectorproduct, orthogonal matrizen, eigenvalues, eigenvectors, homogeneous coordinates.
Recommended reading	Own writings from the blackboard, Exercises and summaries from the internet, Textbook: Peter Stingl: Mathematik für Fachhochschulen, Hanser Verlag, 8. Auflage, 2009, ISBN-10: 3-446-42065-7
Exams	Written Exam 90 Min. (graded)
Comments	Lecture, Exercises, Summary of the solutions in the lecture, Tutorials for further assistance
Lecture Mathematics 1 Laboratory	
Internal number	MKIB142
Lecturer	Prof. Dr. Frank Schaefer
Scope	3 ECTS points, 2 Contact hours
Type/mode	Laboratory Course
Language of instruction	German

Content	Improving the knowledge of the related lectures, basics in computer-algebra systems, mathematical problem solving with computer assistance. With the help of the computer algebra system Maple different, applied mathematical questions from the fields of geometry, curves, interpolation and linear equations will be solved. It will be focussed on matrices and homogenous coordinates, which are an important foundation for computer grafic.
Recommended reading	Short introduction will be given. Exercises distributed in the classes and also available on the internet.
Exams	Exercise 1 Semester (not graded)
Comments	Exercises in the labs with Maple (instructor will be present).

Module Language Competence	
Internal number	MKIB150
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	4 ECTS points, 4 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	The learning of a foreign language is an integral component of the in the course of studies communicated key qualification.
Exams	Individual exams
Lecture Foreign Languages	
Internal number	MKIB151
Lecturer	Mehrere Dozenten
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	English
Content	After a grading test students can deepen their English skills to three grades. The entry level requires the competence grade A2 (basic user) in the six-stage common European reference framework. The first two grades (English for advanced learners 1 and 2) engage besides a recapitulation of grammar mainly in issues of job-oriented common language and cultural studies, e.g. job application letters, descriptions of products and services, business telephone calls, progress of formal and informal conferences, presentations etc. The thus achieved grade complies with 173 points in the TOEFL (computer-based) or the competence grade B2 (independent user) of the European reference framework. In the following grade special language skills (English for science and technics) are leant: In business English the priority is on spoken language and small study groups. At the beginning of the semester each group founds its own company which advances dynamically during the course of the semester. At the same time vocabulary and phrasing in respect of topics like company structures, meetings, negotiation, marketing, production and sale, finances, comprehending of reports and presentations are gone through in order to make the attendees handle the language instruments to cope with each step of the simulation in English. The highlights of the course are a simulated exhibition, a hiring procedure and the group presentation. In technical English the priority is on the learning and practice of a technical basis vocabulary and typical expressions of technical communication.
Recommended reading	Literature depends on grade, PowerPoint presentations, execises, Videos, DVDs
Exams	Written Exam 120 Min. (graded)
Comments	Lecture participation, short talks, discussions

Module Computer Science 2	
Internal number	MKIB210
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	7 ECTS points, 6 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	Theoretische Informatik, Informatik 1
Pre-requisites according to the examination regulations	none
Competences	The module is based on module "Informatik 1”. The students will learn to develop a computer science project using object oriented techniques in Java. They become acquainted with advanced analysis, design and realization competences as well as abstract data types and their implementation by data structures and algorithms. The students will learn to choose an appropriate data type depending on the application area and the given runtime conditions. Furthermore they will be familiar with graphical user interfaces and object-based programming with JavaScript.
Exams	Individual exams
Lecture Computer Science 2	
Internal number	MKIB211
Lecturers	Dipl.-Ing. Christian Meder Prof. Dr.-Ing. Holger Vogelsang
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	This lecture consists of four parts. The first one introduces basic concepts of object oriented programming on the basis of the programming language Java. The main issues are among other things: Language elements of Java, data abstraction and encapsulation, inheritance, polymormism, generic programming, error handling an runtime typ information. Based on these techniques an introduction in modeling of class diagrams with UML is made. Additional practical exercises with a standard IDE adeepen the knowledge. The second part introduces the development of mobile Apps with graphical user interfaces for Android. The third part of the lecture deals with some important data structures like lists, hashtables, tree and graphs and introduces basic algorithms to operate on them. The forth part introduces the modularization of applications with Spring.
Recommended reading	On the lecture homepage: PowerPoint presentation, program examples, script Books:

Exams	Written Exam 120 Min. (graded)
Comments	Preparation of lecture contents and exam
Lecture Computer Science 2 Exercise	
Internal number	MKIB212
Lecturers	B.Sc. Manuel Vogel Dr. Martin Holzer Prof. Dr.-Ing. Holger Vogelsang
Scope	3 ECTS points, 2 Contact hours
Type/mode	Exercise
Language of instruction	German
Content	The students solve Java and JavaScript exercises and model small applications using UML class diagrams.
Recommended reading	Script, compulsory and optional exercises on the homepage, solutions for optional exercises
Exams	Exercise 1 Semester (not graded)
Comments	Practical exercise with discussion of solutions

Module Software Laboratory	
Internal number	MKIB220
Coordinator	Prof. Dr. Martin Sulzmann
Scope	5 ECTS points, 4 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	Informatik 1
Pre-requisites according to the examination regulations	none
Competences	The students learn to apply the theoretical knowledge of "Informatik 2" using the programming language C++. They have design and implement projects with an increasing level of difficulty. The main topics are: - Practicing object oriented programming techniques - Preferring abstractions over concrete implementations - Modeling class and package diagrams before starting an implementation - Code quality assurance by writing automated tests - Teamwork
Exams	Individual exams
Lecture Software Laboratory	
Internal number	MKIB221
Lecturers	Prof. Dr. Heiko Körner Prof. Dr. Christian Pape Prof. Dr. Martin Sulzmann
Scope	5 ECTS points, 4 Contact hours
Type/mode	Laboratory Course
Language of instruction	German
Content	The students implement projects with an increasing complexity in C++. They have to use generic classes, inheritance, polymorphism, abstract classes and interfaces and concepts for error handling and detection like exceptions and assertions. Additionally they will learn to use elements of the STL and to model the classes and their relationships with UML.
Recommended reading	On the homepage: Project description with a step-by-step instruction, Java script, optional exercise with solutions, books: - Ulrich Breymann, C++ - Einführung und professionelle Programmierung, Hanser-Verlag
Exams	Laboratory Work 1 Semester (not graded)
Comments	Laboratory work

Module Technologies of the Internet	
Internal number	MKIB230
Coordinator	Prof. Dr. Christian Zirpins
Scope	5 ECTS points, 4 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	Informatik 1
Pre-requisites according to the examination regulations	none
Competences	The two lectures on the topic of distributed systems ("Distributed Systems 1" and "Distributed Systems 2") teach both foundational and advanced principles that are illustrated through practical examples of existing paradigms and technologies. Principles treated in this course encompass foundations of goals and classes of distributed systems, as well as their architectures, processes, communication and name systems. Advanced principles include synchronisation, consistency and replicability, error-tolerance and security. The principles introduced in this course are exemplified through the paradigms of web-based systems and component-based systems. This includes sample implementations of individual principles. In addition, the course gives an introduction into the development of corresponding systems using actual technologies as examples.
Exams	Written Exam 120 Min. (graded)
Lecture Distributed Systems 1	
Internal number	MKIB231.a
Lecturer	Prof. Dr. Christian Zirpins
Scope	3 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The course provides a practical introduction to the concepts and paradigms of distributed systems using the example of web technologies and application development on the web. This initially involves an introduction of the world wide web with basic protocols such as HTTP and other standards in the context of the Internet. After that an introduction to the design and construction of web applications is provided. This includes firstly the frontend development with HTML5, CSS3 as well as client-side JavaScript and secondly the backend development with server-side JavaScript on the Node.js platform. Interactions between frontend and backend follow modern REST/HTTP and AJAX techniques. In addition, mechanisms for personalization with cookies and sessions as well as to authenticate users are presented. The course closes with a detailed discussion of web application security.

Auflage, 2014 - David Gourley, Brian Totty, "HTTP: The Definite Guide", O'Reilly, 2002 - Mark Pilgrim, "HTML5 Up and Running", O'Reilly, 2010 (Online: http://diveintohtml5.info) - Marijn Haverbeke, "Eloquent JavaScrip", No Starch Press, 2014 (Online: http://eloquentjavascript.net) - Peter Gasston, "The Book of CSS3 - A Developer's Guide to the Future of Web Design", 2nd Edition, No Starch Press, 2014 - Andy Budd, Emil Björklund, "CSS Mastery", Third Edition, Apress, 2016 (Online verfügbar im Hochschulnetz) - Ethan Brown, "Web development with Node and Express", O'Reilly, 2014 - Robert Prediger ; Ralph Winzinger, "Node.js : Professionell hochperformante Software entwickeln", Hanser, 2015 (Online verfügbar im Hochschulnetz) - Additional literature will be announced during the lecture
Exams	Module exam
Comments	In preparation for individual lecture units, the self-study of basic content is required by means of the accompanying literature (relevant chapters will be announced in the event). Further independent work concerns the follow-up of the lecture contents and the exam preparation.
Lecture Interfacedesign	
Internal number	MKIB231.b
Lecturer	Prof. Daniel Schwarz
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	This course provides students with the theoretical and applied knowledge about the creation of media-based web applications. This includes the foundations of the markup language HTML and Cascading Style Sheets, how to embed different types of media, as well as the conception, design and programming of responsive web applications.
Recommended reading	Lecture notes, slides (PDF), multiple examples of programs
Exams	Module exam
Comments	Preparation of lecture contents and exam

Module Mathematics 2	
Internal number	MKIB240
Coordinator	Prof. Dr.-Ing. Astrid Laubenheimer
Scope	7 ECTS points, 6 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	
Exams	Written Exam 120 Min. (graded)
Lecture Analysis	
Internal number	MKIB241
Lecturer	Prof. Dr.-Ing. Astrid Laubenheimer
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German

Module Computer Engineering	
Internal number	MKIB250
Coordinator	Prof. Dr. Christian Langen
Scope	7 ECTS points, 6 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	Students will learn the basic concepts of computer engineering. They learn the mathematical concepts of number representation and Boolean algebra, which are required for the analysis and design of hardware circuits. They understand how the basic digital computing elements are constructed and how to combine them into complex switching networks. Furthermore, the students will be able to explain the structure and operation of current standard circuits such as adders or shift registers. Additionally, students are familiar with internal functions of typical processors. They are able to implement the hardware related software parts using the "C" programming languege including the use of typical peripherals. All knowledge gained is reinforced by practical work in the laboratory.
Exams	Individual exams
Lecture Computer Engineering	
Internal number	MKIB251
Lecturers	Prof. Dr. Dirk Hoffmann Prof. Dr. Christian Langen
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	On the processor side, the lecture will cover the following, basic processor hardware, processor architecture, addressing modes, instructions, memory mapping, peripherals and bit processing. The special features of the programming languages C / C++ needed for hardware programming will also be covered.
Recommended reading	Powerpoint slide, personal notes, web based exercises and the suggested solution (provided upon request).
Exams	Written Exam 90 Min. (graded)
Comments	The student will be required to come prepared to participate in the lecture and will be expected to be able to develop a summary upon completion of the lecture, all exercises provided for reinforcement will be required to be individual work.
Lecture Digital Technology Laboratory	
Internal number	MKIB252

Lecturers	Prof. Dr. Dirk Hoffmann Prof. Dr. Albrecht Ditzinger
Scope	3 ECTS points, 2 Contact hours
Type/mode	Laboratory Course
Language of instruction	German
Content	Lab experiments will be conducted using: - Digital Circuits - Microcontrollers - Peripherals - Timers and Counters
Recommended reading	Exercises, equipment provided and various manuals and other support material.
Exams	Exercise 1 Semester (not graded)
Comments	All laboratory work will be group work. It will include the conduct of the experiment, demonstration of the required result and be prepared to answer questions on the work and the results. Groups are on their own and are required to come to the laboratory prepared to conduct the exercise. Each group will prepare a final documentation of the exercise.

Module System Software and System Programming	
Internal number	MKIB310
Coordinator	Prof. Dr. Thomas Fuchß
Scope	9 ECTS points, 8 Contact hours
Placement	3rd Semester
Pre-requisites with regard to content	Informatik 1, Informatik 2, Softwarelabor, Theoretische Informatik
Pre-requisites according to the examination regulations	none
Competences	
Exams	Individual exams
Lecture System Software	
Internal number	MKIB311
Lecturer	Prof. Dr. Thomas Fuchß
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	
Recommended reading	
Exams	Written Exam 90 Min. (graded)
Comments	
Lecture System Programming	
Internal number	MKIB312
Lecturer	Prof. Dr. Britta Nestler
Scope	5 ECTS points, 4 Contact hours
Type/mode	Laboratory Course
Language of instruction	German
Content	The course is organized in three exercises, covering compiler construction and interprocess communication. Starting with a scanner, the students consolidate their skills in handling large dynamic data structures, pointers, and doing low level IO. The second exercise focuses on the development of a recursive descendent parser and a short introduction to semantic analysis and code generation. The third exercise is an introduction to the field of interprocess communication. Within the exercise, elementary techniques and concepts are trained: - generating processes / threads - terminating processes / threads - synchronizing processes / threads
Recommended reading	Slides and textbooks:

	- Eduard Glatz. Betriebssysteme: Grundlagen, Konzepte, Systemprogrammierung - dpunkt.verlag, 2010 - A.V. Aho, M.S. Lam, R. Sethi und J.D. Ullman. Exams	Laboratory Work 1 Semester (not graded)
Comments	Attended teamwork and three lectures.

Module Databases and Communication Networks 1	
Internal number	MKIB320
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	7 ECTS points, 6 Contact hours
Placement	3rd Semester
Pre-requisites with regard to content	Theoretische Informatik, Mathematik 1, Informatik 1
Pre-requisites according to the examination regulations	none
Competences	The students know the current models of communication and database technology and are able to classify and evaluate unknown, e.g. new systems. They are familiar with the advantages and disadvantages of different architectures and will be considered when selecting the architecture for their own products. In the database area, they are largely familiar with the SQL-92 standard and are able to select, set up and safely operate database systems. The students are able to analyze given facts, to transfer these facts into a normalized data model, to create this data model under SQL and to use the resulting SQL databases under object-oriented languages. In the field of communication networks, students know the individual layers of the TCP/IP layer model and understand the tasks and service models of each layer. They can characterize and compare different protocols of each layer. They can analyze the requirements of a given application, select the most suitable protocols for that application, and combine them into a functioning network stack. You can also use the client-server approach and socket programming techniques to solve your own problems.
Exams	Written Exam 120 Min. (graded)
Lecture Databases 1	
Internal number	MKIB321.a
Lecturer	Prof. Dr.-Ing. Holger Vogelsang
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	Introduction to information systems, basics of database systems, database organization, data models, database schema, architecture: 3-layer model, client-server architecture, language interfaces: SQL92 (queries, DDL, DML), SQL:2003 (object-oriented extensions, NF2), JDBC, recovery and transactions, ERM, mapping of entities and relationships to relational data models, normalization, OR mapping.

Recommended reading	- Script - Example databases of the lecture for the common database systems - Exercises - Sample programs - Collection of old exams and their solutions - Edwin Schicker, "Datenbanken und SQL", Springer Vieweg, 2017, ISBN: 978-3834817327 - Gunter Saake, Kai-Uwe Sattler, "Datenbanken - Konzepte und Sprachen", mitp, 2013, ISBN: 978-3286694530
Exams	Module exam
Comments	
Lecture Communication Networks 1	
Internal number	MKIB321.b
Lecturer	Prof. Dr. Oliver P. Waldhorst
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	Distributed systems; data transmission and communication networking techniques (circuit/packet switching); Serial / Parallel, fault detection-/protection mechanisms; service and protocol specification; flow control; negotiating qualities of service; multiplexing; time charts and finite state machines as a means of describing protocols; OSI reference model (Layers, protocols, services), protocol-stacks; the physical layer: analog and digital transmission, transmission media, STP/UDP, ISDN, xDSL; the data link layer: character and bitorientierte protocols (BSC, HDLC), Local area networks (LAN e.g.ETHERNET, Token Ring), topology, access procedures; the network layer: connection oriented and connectionless services, routing, congestion control; the transport layer: transport layer classes; RPC; socketprogramming; TCP / IP; the application system: Internet, services and protocols in the Internet environment (Telnet, FTP , SMTP, SNMP, DNS, Web, HTML / HTTP);
Recommended reading	• Word handouts • Tanenbaum: Computer Networks, Pearson Studies, 2003 (german edition) • Collection of old exams and their solutions
Exams	Module exam
Comments	Lecture supported by transparencies and Power Point Slides. Student questions are welcome. In parallel to the lecture the participants should control their knowledge using the old exams and their solutions (available on the server).
Lecture Databases 1 Laboratory	
Internal number	MKIB322
Lecturers	M.Sc. Amir Bukhari Prof. Dr.-Ing. Holger Vogelsang
Scope	3 ECTS points, 2 Contact hours
Type/mode	Laboratory Course
Language of instruction	German

Content	Adatabase application for a flight reservation system is designed and prototypically implemented. This includes setting up a DB scheme, the design and testing of SQL queries, the use of transactions and transaction levels, as well as programming a seat reservation transaction with Java, JDBC and SQLJ-based on Oracle.
Recommended reading	Sample database, JUnit test cases, test-GUI; Textbooks: - "Grundlagen von Datenbanksystemen", Ausgabe Grundstudium (Taschenbuch) von Ramez Elmasri, Shamkant B. Navathe, Pearson, 2005, ISBN: 3827371538 - "Datenbanksysteme" von Alfons Kemper, Andre Eickler, Oldenbourg, 2006, ISBN: 3486576909 - "Datenbanken & Java. JDBC, SQLJ, ODMG und JDO" von Gunter Saake, Kai-Uwe Sattler, Dpunkt Verlag, 2003, ISBN: 3898642283
Exams	Laboratory Work 1 Semester (not graded)
Comments	Supervised laboratory with final presentation on the computer, self-work, preparation and after working of lab sessions, prepare a reportof the laboratory tasks.

Module Man-Machine-Communication 1	
Internal number	MKIB330
Coordinator	Prof. Dr. Ulrich Bröckl
Scope	5 ECTS points, 3 Contact hours
Placement	3rd Semester
Pre-requisites with regard to content	Informatik 1
Pre-requisites according to the examination regulations	none
Competences	The courses of this module teach the students fundamental programming and algorithmic skills. The students should be enabled to analyze small problems, find solutions to these problems, and develope them in the Java programming language.
Exams	Individual exams

Exams	Individual exams
Lecture Business Administration	
Internal number	MKIB351
Lecturer	Prof. Dr. Uwe Haneke
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	Es werden folgende Kenntnisse vermittelt: - Java-Grundkenntnissen: Variablen, Kontrollstrukturen, Methoden, Klassen, Objekte, Felder, Schnittstellen, Dokumentation mit Javadoc, Testen mit JUnit, Programmierkonventionen. - Rekursion als Problemlösungs- und Programmierkonzept. - Objekt-orientierte Analyse und Entwurf mit Hilfe der UML (Grundla-gen von Aktivitäts-, Klassen-, Objekt- und Paketdiagramm). - Entwurf und die Aufwandsabschätzung von Algorithmen anhand typi-scher Such- und Sortierverfahren sowie Backtracking. - Entwurfsmethodiken wie die Schrittweise Verfeinerung, Bottom-Up, Top-Down und Teile-und-Beherrsche.
Recommended reading	Tafelmitschrift, Übungsaufgaben mit Lösungen, Java-Programme und deren Dokumentation als Javadoc. Weitere Java-Übungsaufgaben mit Lösungen zur Vertiefung. Joachim Goll, Cornelia Heinisch, "Java als erste Programmiersprache: Ein professioneller Einstieg in die Objektorientierung mit Java", Springer Vieweg, 7. Auflage, 2014. James Gosling, Bill Joy, Guy Steele, Gilad Bracha, Alex Buckley, "The Java Language Specification, Java SE 8 Edition", Oracle America, 8. Auflage, März 2015
Exams	Written Exam 90 Min. (graded)
Comments	Vorlesungsteilnahme. Lösen einfacher Aufgaben während der Vorlesung.

Module Internship Preparation and Roundup	
Internal number	MKIB4P0
Coordinator	Prof. Dr. Heiko Körner
Scope	6 ECTS points, 4 Contact hours
Placement	4th Semester
Pre-requisites with regard to content	Informatik 1
Pre-requisites according to the examination regulations	Vorstudium
Competences	The students improve their vocational skills which are also important for the internship. Topics include managing projects, time and cost planning. The students will lean how to use standard software like the MS-Office products for evaluating calculations and presenting them attractively. In addition to that, macro skripts will be taught to solve recurring problems.
Exams	Individual exams
Lecture Internship Preparation	
Internal number	MKIB4P1
Lecturers	Dr. Martin Holzer B.Sc. Veit Richter
Scope	3 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	This course deals with the general handling of MS Office products and gives specifically an introduction to the main functions of MS-Excel. Topics include input methods, formulas, chart depictions and search functions. Basic knowledge about the programming in VBA are also taught. These methods will also be used for macro skripts in MS-Word. Afterwards, the students have learned how to solve typicals problems efficiently with these today's standard programs.
Recommended reading	MS-PowerPoint slides, an accompanying script for reference, exercises.
Exams	Exercise 1 Week (not graded)
Comments	The course consists of of a lecture (50%) and supervised, practical exercises (50%).
Lecture Internship Roundup	
Internal number	MKIB4P2
Lecturers	Dipl. WiInf. Lars Thoralf Thielemann Prof. Dr. Heiko Körner
Scope	3 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	This course aims to systematically reflect the internship done by each student and especially to advise them with their written assignments to be submitted.

	To this end, we will discuss the entire process of scientific writing, address each particular step in more detail, and deduce general guidelines towards a smooth implementation into practice. Furthermore, this course provides a thorough introduction to the use of LaTeX, a typesetting system widespread throughout the scientific community.
Recommended reading	- Slides provided by lecturer, individual notes taken by students - General literature on scientific writing (e.g., "Writing scientific English" by Tim Skerns) - General literature / online tutorials on the LaTeX typesetting system
Exams	Exercise 1 Week (not graded)
Comments	Students are expected to attend this course regularly and to actively take part in discussions and practical lab exercises. To pass this course, they must further submit their written assignment by the end of the course (meeting the demands specified by the lecturer in the first session).

Module Internship	
Internal number	MKIB4PX0
Coordinator	Prof. Dr. Thomas Fuchß
Scope	24 ECTS points, 0 Contact hours
Placement	4th Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	Vorstudium
Competences	The internship is designed to deepen the previously acquired knowledge and skills by qualified collaboration in a larger project. The focus is on improving the technical competence and the development of social and personal skills. The student needs to assert himself as an independent member of the team. He becomes acquainted with new fields of duty and will become familiar with new tools. He learns to evolve himself and to assess his skills. The internship may be pursued in a company, in a research facility or an authority.
Exams	Individual exams
Lecture Internship	
Internal number	MKIB4PX1
Lecturer	Prof. Dr. Thomas Fuchß
Scope	24 ECTS points, 0 Contact hours
Type/mode	On-the-job Training
Language of instruction	German
Content	
Recommended reading	
Exams	Hands-on Work 95 Days (not graded)
Comments	

Module Software Engineering and Distributed Systems 2	
Internal number	MKIB510
Coordinator	Prof. Dr. Thomas Fuchß
Scope	8 ECTS points, 7 Contact hours
Placement	5th Semester
Pre-requisites with regard to content	Praxistätigkeit, Technologien des Internets, Mensch-Maschine-Kommunikation 1, Informatik 2, Datenbanken und Kommunikationsnetze 1
Pre-requisites according to the examination regulations	Vorstudium
Competences	The students learn how to work independently and productively in large software projects. This includes the decomposing of development tasks as well as the determination and assessment of appropriate architectures. They are able to capture the necessary steps in the context of a given task, to structure and clarify their decisions using suitable tools and methodologies, independently. In this context, the students also gain the ability to recognize and classify goals and problems of distributed software systems. They can explain the general concepts of architectures, processes, communication, naming, coordination, replication fault tolerance and security, and apply them to the construction of distributed software services and applications.
Exams	Written Exam 120 Min. (graded)
Lecture Softwareengineering Laboratory	
Internal number	MKIB511
Lecturer	Prof. Dr. Thomas Fuchß
Scope	3 ECTS points, 2 Contact hours
Type/mode	Laboratory Course
Language of instruction	German
Content	Accompanying the software engineering lecture this course project covers a complete step in a modern software development process. Beginning with requirement engineering and analysis, central use cases are designed and finally implemented in Java. By this students learn more than facts, they get experiences and they understand the meaning of terms like architecture-oriented, iterative, incremental, or component-based.
Recommended reading	Slides, textbooks, and other literature:

Exams	Exercise 1 Semester (not graded)
Comments	Attended teamwork
Lecture Distributed Systems 2	
Internal number	MKIB512.a
Lecturer	Prof. Dr. Christian Zirpins
Scope	3 ECTS points, 3 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The lecture conveys both fundamental and extended principles of distributed systems and illustrates these in practical form on the basis of concrete paradigms and technologies. The spectrum of principles covered includes fundamental aspects of the objectives and classes of distributed systems, as well as their architectures, processes, communications, and naming. Advanced principles include coordination, consistency and replication, fault tolerance and security. The covered principles are exemplified by various paradigms. Here, exemplary implementations of individual principles are presented. In addition, an introduction to the development of corresponding systems based on concrete software technologies is given.
Recommended reading	- Andrew S. Exams	Module exam
Comments	Autonomous work includes pre- and post processing of lectures, exercises and exam preparation.

Lecture Software Engineering	
Internal number	MKIB512.b
Lecturer	Prof. Dr. Thomas Fuchß
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The course "software engineering" concentrates on methods and techniques for the structured development of large software systems. Beyond the repetition of well-known object oriented concepts, the focus lies on establishing the fundamentals of modern and agile software development process. Based on their experiences made during internship, the students discover the real challenges associated to such a development process. The lecture is accompanied by a course-project, to gain experiences in practice. This covers agile and component based development techniques, containing requirement engineering, analysis, and design as well as a prototypical implementation of the software system in java.
Recommended reading	Slides, textbooks, and other literature: - Craig Larman. Content	Graphical primitives, polygonalmodels, transformations. Coloring, lighting and textures. Animation through sensors and interpolators. Elements of OpenGL: Vertices, polygons, transformation matrices. Lighting and textures
Recommended reading	Material from the lecture
Exams	Exercise 1 Semester (not graded)
Comments	Presence required, solution of lab problems

Module Student Research Project	
Internal number	MKIB540
Coordinator	Prof. Dr. Heiko Körner
Scope	5 ECTS points, 4 Contact hours
Placement	5th Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	The students gain the ability to elaborate an individual solution of a clearly defined design requirement. In addition to the practical work the students will develop a documentation which clearly defines their individual work. The students will demonstrate the ability to present resultant work in a colloquial setting.
Exams	Individual exams
Lecture Student Research Projekt	
Internal number	MKIB541
Lecturer	Alle Dozenten
Scope	4 ECTS points, 4 Contact hours
Type/mode	Hands-on Experience
Language of instruction	German
Content	The project will require individual work to solve problems in both the software and hardware arenas. Normally the work will be comprised of a practical problem, but instead may include software or hardware evaluation or literature research. The student will prepare a final documentation for the project. The format, content, size, etc. will be determined by the project advisor depending upon the requirements set forth in the initial project. The project is concluded by a colloquium in which the student will defend his work.
Recommended reading	
Exams	Homework 1 Semester (not graded)
Comments	All work will be individual work and will include basic literature research, system analysis, coding, documentation, and oral presentation.
Lecture Student Research Projekt Colloquium	
Internal number	MKIB542
Lecturer	Alle Dozenten
Scope	1 ECTS points, 0 Contact hours
Type/mode	Hands-on Experience
Language of instruction	German
Content	The colloquium is the final step in completing the project work. The colloquium will include a description of the project, the work conducted and the final solution.
Recommended reading	

Exams	Verbal Exam 20 Min. (graded)
Comments	All work will be individual work and will include the presentation, discussion, defense of the work.

Module ERP Systems	
Internal number	MKIB550
Coordinator	Prof. Dr. rer. pol. Mathias Philipp
Scope	7 ECTS points, 6 Contact hours
Placement	5th Semester
Pre-requisites with regard to content	Betriebswirtschaftslehre
Pre-requisites according to the examination regulations	Vorstudium
Competences	The students shall learn to think in business processes on the basis of integrated ERP systems. They should recognize the interdependence of operational functions, and thus deepen their basic economical knowledge about processes (horizontal integration). Further, the students recognize the need for vertical integration as a prerequisite for the development of ERP systems for management information systems. In addition the students learn architecture, design and development of ERP systems.
Exams	Written Exam 90 Min. (graded)
Lecture ERP Systems	
Internal number	MKIB551.a
Lecturer	Prof. Dr. rer. pol. Mathias Philipp
Scope	3 ECTS points, 3 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	Contents: ERP basics, system integration, system architectures, and logistics: Distribution (SD), Materials Management (MM), Production Planning and Control (PP) as well as Financial Accounting (FI) and Controlling (CO). In addition, an overview is given to the software selection.
Recommended reading	Recommended reading: Lecture material completely as PowerPoint documents, blackboard notes for interactive development of central problem positions, a main textbook to ERP, a main textbook to SAP ECC 6.0.
Exams	Module exam
Comments	Kind of work: Lecture participation

Lecture ERP Laboratory	
Internal number	MKIB552
Lecturer	Prof. Dr. rer. pol. Mathias Philipp
Scope	2 ECTS points, 1 Contact hours
Type/mode	Laboratory Course
Language of instruction	German
Content	Contents: The materials provide an introduction to Global Bike Inc. (GBI), an SAP ERP navigation case study, exercises and case studies for the following SAP ERP Modules: Sales (SD), Materials Management (MM), Production Planning and Control (PP), Financial Accounting (FI), Controlling (CO) . Independent work individually or as a group as a couple of the case studies in an SAP ERP system. Software: SAP ECC 6.0, Database: GBI Alternative to the laboratory: Introduction to the ABAP programming language with practical exercises in the SAP NetWeaver Application Server ABAP. Learning objectives include: language elements Workbench database, selection screens, function modules, ABAP OO.
Recommended reading	Recommended reading: Extensive material for introduction to the topic as well as on each case study. Provisioning is about the blended learning and e-learning platform ILIAS.
Exams	Exercise 1 Semester (not graded)
Comments	Kind of work: Labor participation and preparation of laboratory results. Exercises and case studies from the curriculum GBI powered by t he SAP University Alliances community. Some case studies have been extended to more detailed tasks.

Module Embedded Software	
Internal number	MKIB610
Coordinator	Prof. Dr. Dirk Hoffmann
Scope	5 ECTS points, 4 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Informatik 1, Informatik 2, Technische Informatik
Pre-requisites according to the examination regulations	Modul Internship
Competences	The courses of this module teach the students the fundamental concepts about embedded systems. Students know the basic terminology about embedded systems and they are able to distinguish different types of real-time systems from each other. By studying the CAN bus technology, students get to know a typical communication medium and acquain with the CDMA technology an important coding scheme for data transmission. Students are able to implement typical programming tasks in the field of embedded systems in C. Furthermore, students learn how to deal with software tools that are suited for analyzing and developing embedded systems.
Exams	Individual exams
Lecture Embedded Software	
Internal number	MKIB611
Lecturer	Prof. Dr. Dirk Hoffmann
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The lecture introduces software development methods for embedded real time systems. Embedded systems within the meaning of this lecture are systems that are controlled by computer software and are part of a larger system whose primary function is not compute-oriented. For real-time systems, the result has to be computed within a specified time frame. In particular, topics from the following areas are covered: Design and architecture of automotive ECUs, bus architectures, data transmission encodings, Embedded C.
Recommended reading	Slides, blackboard, exercise sheets
Exams	Written Exam 90 Min. (graded)
Comments	Lecture
Lecture Embedded Software Laboratory	
Internal number	MKIB612
Lecturer	Prof. Dr. Dirk Hoffmann
Scope	3 ECTS points, 2 Contact hours
Type/mode	Laboratory Course
Language of instruction	German
Content	With the help of the modeling tool CANoe the participants design a control unit

	in the field of automotive electronics. The project also includes tasks from the field of signal decoding.
Recommended reading	Software and hardware tools für designing automative ECUs
Exams	Exercise 1 Semester (not graded)
Comments	Practical work

Module Man-Machine-Communication 2	
Internal number	MKIB620
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	6 ECTS points, 6 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Computergrafik, Informatik 1, Informatik 2, Mediengestaltung, Medienprojekt, Mensch-Maschine-Kommunikation 1, Softwareengineering und Verteilte Systeme 2, Softwarelabor
Pre-requisites according to the examination regulations	none
Competences	This module integrates different media technologies. The students will be able to write user interfaces for rich fat clients and mobile media applications. They learn how computer vision works and how computer vision ist used in media applications.
Exams	Verbal Exam 20 Min. (graded)
Lecture Graphical User Interfaces	
Internal number	MKIB621.a
Lecturer	Prof. Dr. Matthias Wölfel
Scope	3 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The lecture first deals with SWT/JFace and the Eclipse Rich Client Platform 4 (RCP), which uses SWT and JFace as its basis. The most important topics are the model-view-controller pattern, layout management and event handling using the observer pattern. Based upon this techniques advanced technologies like the separation of business logic and user interface code using data binding and dialog control are presented. Other topics are internationalization and multithreading in the context of user interfaces. The last part of the lecture shows the declarative construction of user interfaces and the application of the RCP framework.

Lecturer	B.Sc. Moritz Aleithe
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The lecture first deals with SWT/JFace and the Eclipse Rich Client Platform 4 (RCP), which uses SWT and JFace as its basis. The most important topics are the model-view-controller pattern, layout management and event handling using the observer pattern. Based upon this techniques advanced technologies like the separation of business logic and user interface code using data binding and dialog control are presented. Other topics are internationalization and multithreading in the context of user interfaces. The last part of the lecture shows the declarative construction of user interfaces and the application of the RCP framework.

Content	The course focuses on fundamental object-oriented design methods with an emphasis on design patterns and model driven concepts. The students learn to recognize, to know when to use, and to apply design patterns in varying situations in the context of an evolutionary development process. Furthermore the ability of an axiomatic rule base application of patterns, within a model driven approach, are discussed.

Content	TERP10: SAP ERP - Integration of Business Processes is a 10-day training course held at the universities participating in the pilot project. The students learn how the fundamental integrative business processes in procurement, production, planning, project management, sales, customer service, asset management, financial accounting, human resources, and analytics interact within the SAP ERP application. The course provides students with a broad basic knowledge of the core business processes, business interrelations, and integration of business processes in SAP ERP. At the end of the course, students take a certification examination. If they pass the examination, they receive an SAP certificate, which is a fully recognized qualification in the industry.

Content	The lecture teaches the construction of mobile media applications. The main concepts are discussed using the Android platform. In a first partt, the basic technologies and limitations of mobile devices are shown. The second part examins different development strategies like native applications, device independend abstractions and web applications. A main part of the lecture is the integration of different media types into mobile applications and the constraints the developer has to keep in mind.

Lecturers	Prof. Thomas Hinz M.Sc. Bernd Dudzik
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	Emotional expressions are important signals for people to make sense of situations, actions and relationships in their social interactions with each other. Is the empowerment of technological systrms with the capacity to also sense and express emotions able to improve their users' interactions with them? This question is the driving force behind the field of Affective Computing. The students know different theories of emotions, contrast them with each other and debate them. They apply the acquired knowledge by addressing

	problems from within the primary areas of application for Affective Computing through the development of prototypical interactive systems that are capable of sensing or expressing emotions.
Recommended reading	Lecture notes, case studies.

Lecture Big Data Engineering	
Internal number	I W926
Lecturer	Prof. Dr. Christian Zirpins
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The lecture Big Data Engineering addresses the systematic construction of data-intensive systems. Generic architectural approaches are introduced in order to design robust, performant and scalable data systems for various applications. For different architectural areas various kinds of data storage and processing models are discussed. Topics include, among others, distributed file systems, serialization, batch and stream processing with MapReduce and other programming models, queuing mechanisms and NoSQL databases. These are both conceptually described as well as implemented by means of exemplary tools and techniques. The focus is on established industry standards such as Apache Thrift, Hadoop, Kafka, Cassandra, Storm. These are illustrated by means of an exemplary Web Analytics application. During the course students acquire, among others, the following abilities: - They evaluate different approaches of data systems for given application problems with specific requirements. - They describe structure and function of specific architectural approaches for Big Data systems. - They categorize tools and techniques for Big Data systems and utilize them professionally. - They design architecture and data models as well as processing logic and queries for given Big Data applications and implement these based on specific open source tools and techniques.
