<b>Module Computer Science 1</b>	
Internal number	MKIB110
Coordinator	Prof. Dr. Christian Pape
Scope	8.0 ECTS points, 6.0 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	The courses of this module teach the students fundamental programming and algorithmic skills. The students should be enabled to analyze small problems, find solutions to these problems, and develop them in the Java programming language.
Exams	Individual exams
<b>Lecture Computer Science 1</b>	
Internal number	MKIB111
Lecturer	Prof. Dr. Christian Pape
Scope	5.0 ECTS points, 4.0 Contact hours 150 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	After attending the lecture, the students are able to solve small computer science problems with the Java programming language. They know common design methods, basic search and sort procedures, and can apply them in practice.
Recommended reading	Selected exercises with solutions, slides in PDF format, Java programs and their documentation as Javadoc. Supplementary Java exercises with solutions to deepen the programming skills.
Exams	Written Exam 120 Min. (graded)
Comments	Lecture participation. Solving simple exercises in the lecture with teacher support.
<b>Lecture Computer Science 1 Exercise</b>	
Internal number	MKIB112
Lecturer	Prof. Dr. Christian Pape
Scope	3.0 ECTS points, 2.0 Contact hours 90 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Exercise
Language of instruction	German

Content	The students turn small computer sciences problems into practice (design, implementation with Java, testing, debugging). The students are able to create their own homepage.
Recommended reading	
Exams	Exercise 1 Semester (not graded)
Comments	Practical assignment in a computer laboratory.

<b>Module Media Design</b>	
Internal number	MKIB120
Coordinator	Prof. Thomas Hinz
Scope	7.0 ECTS points, 6.0 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	
Exams	Individual exams
<b>Lecture Media Design</b>	
Internal number	MKIB121
Lecturer	Prof. Thomas Hinz
Scope	4.0 ECTS points, 4.0 Contact hours 120 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	The students become acquainted with the theoretical foundations of media design. This includes knowledge about creativity techniques, design rules and gestalt principles, systems of organisation, micro- and macro typography, colour theory, logos/pictograms/icons as well as grid systems for layouts. Additionally, they gain insights into analog and digital photography and the conception and design of digital media content exemplified through web applications. The students explore the history of design, starting at the dawn of industrialisation and including the seminal design movements of the 19th and 20th centuries as well as contemporary trends in design. This overview enables students to categorise and evaluate different design styles, allowing an integration of the acquired knowledge into their own design processes.

<b>Module Theoretical Computer Science</b>	
Internal number	MKIB130
Coordinator	Prof. Dr. Heiko Körner
Scope	4.0 ECTS points, 4.0 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	Participants of this lecture will be in a position to recognize the fundamental limitations of today's computers when solving important problems. Hence, this course gives an introduction to the basic areas of modern theoretical computer science. The Chomsky hierarchy helps the students to classify formal languages by their algorithmic complexity. Furthermore, the students use computational models (finite state automata, push-down automata) to represent today's computers and to understand their limits. Due to these limitations, several problems are shown to be unsolvable. Proving all these results requires precise mathematical and logical arguments, and the students are intensively trained to use them correctly.
Exams	Individual exams
<b>Lecture Theoretical Computer Science</b>	
Internal number	MKIB131
Lecturer	Prof. Dr. Heiko Körner
Scope	4.0 ECTS points, 4.0 Contact hours 120 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	This course gives an introduction to the theory of formal languages. The Chomsky hierarchy will serve as a model to classify these languages by their computational complexity. Modern computers are represented by finite state automata, showing their principal limits. The students also learn how to apply several proof techniques.  The lecture include the following areas of theoretical computer science: mathematical logic, formal languages, proof techniques, the O-calculus, finite automata, regular languages and expressions, the Chomsky hierarchy, the pumping lemma for regular and context-free languages and the minimization of finite automata by the theorem of Myhill-Nerode. Furthermore, the course covers pushdown automata, the CYK algorithm and closure properties of regular and context-free languages.

Recommended reading	<p>The substance of the lecture will be discussed at the blackboard. Lecture notes containing the complete material are also available. Furthermore, there are sample solutions to all exercises.</p> <p>Literature: D. W. Hoffmann: Theoretische Informatik, 3. Auflage. Hanser, 2015.  M. Sipser: Introduction to the Theory of Computation, 3rd edition. Cengage Learning, Inc., 2012.</p>
Exams	Written Exam 90 Min. (graded)
Comments	This course will take place as a pure lecture. Numerous exercises deepen selected areas and will be discussed in tutorials.

<b>Module Mathematics 1</b>	
Internal number	MKIB140
Coordinator	Prof. Dr.-Ing. Astrid Laubenheimer
Scope	8.0 ECTS points, 6.0 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	Participants learn the mathematical basics from linear algebra, which are often used in computer science. These basics are specifically needed in computer graphics, robotic, cryptography.
Exams	Individual exams
<b>Lecture Mathematics 1</b>	
Internal number	MKIB141
Lecturer	M.Sc. Martin Redlof
Scope	5.0 ECTS points, 4.0 Contact hours 150 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	<p>The participants should learn basic knowledge of mathematics and especially of linear algebra and acquire the methods to solve smaller mathematical tasks by themselves. In the part on linear algebra we will focus on knowledge needed in computer graphic and 3D simulations.</p> <p>Content of the lectures: Proof methods, relations, euqivalence relations, modulo-calculation, Euklid's algorithm, functions, operations, groups, rings, fields, polynomial rings, finite fields, interpolation, vector spaces, basis, dimension, linear equations, rank, Gauß-Jordan-algorithm, determinant, matrices, linear map, inverse matrices, rotation, translation, scaling, scalarproduct, norm, vectorproduct, orthogonal matrizen, eigenvalues, eigenvectors, homogeneous coordinates.</p>
Recommended reading	Own writings from the blackboard, Exercises and summaries from the internet, Textbook: Peter Stingl: Mathematik für Fachhochschulen, Hanser Verlag, 8. Auflage, 2009, ISBN-10: 3-446-42065-7
Exams	Written Exam 90 Min. (graded)
Comments	Lecture, Exercises, Summary of the solutions in the lecture, Tutorials for further assistance
<b>Lecture Mathematics 1 Laboratory</b>	
Internal number	MKIB142
Lecturer	M.Sc. Martin Redlof

Scope	3.0 ECTS points, 2.0 Contact hours 90 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Laboratory Course
Language of instruction	German
Content	Improving the knowledge of the related lectures, basics in computer-algebra systems, mathematical problem solving with computer assistance. With the help of the computer algebra system Maple different, applied mathematical questions from the fields of geometry, curves, interpolation and linear equations will be solved. It will be focussed on matrices and homogenous coordinates, which are an important foundation for computer graphic.
Recommended reading	Short introduction will be given. Exercises distributed in the classes and also available on the internet.
Exams	Exercise 1 Semester (not graded)
Comments	Exercises in the labs with Maple (instructor will be present).

<b>Module Language Competence</b>	
Internal number	MKIB150
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	4.0 ECTS points, 4.0 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	The learning of a foreign language is an integral component of the in the course of studies communicated key qualification.
Exams	Individual exams
<b>Lecture Foreign Languages</b>	
Internal number	MKIB151
Lecturer	Mehrere Dozenten
Scope	4.0 ECTS points, 4.0 Contact hours 120 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	English
Content	<p>After a grading test students can deepen their English skills to three grades. The entry level requires the competence grade A2 (basic user) in the six-stage common European reference framework. The first two grades (English for advanced learners 1 and 2) engage besides a recapitulation of grammar mainly in issues of job-oriented common language and cultural studies, e.g. job application letters, descriptions of products and services, business telephone calls, progress of formal and informal conferences, presentations etc. The thus achieved grade complies with 173 points in the TOEFL (computer-based) or the competence grade B2 (independent user) of the European reference framework. In the following grade special language skills (English for science and technics) are learnt: In business English the priority is on spoken language and small study groups. At the beginning of the semester each group founds its own company which advances dynamically during the course of the semester. At the same time vocabulary and phrasing in respect of topics like company structures, meetings, negotiation, marketing, production and sale, finances, comprehending of reports and presentations are gone through in order to make the attendees handle the language instruments to cope with each step of the simulation in English. The highlights of the course are a simulated exhibition, a hiring procedure and the group presentation. In technical English the priority is on the learning and practice of a technical basis vocabulary and typical expressions of technical communication.</p>
Recommended reading	Literature depends on grade, PowerPoint presentations, excercises, Videos, DVDs

Exams	Written Exam 120 Min. (graded)
Comments	Lecture participation, short talks, discussions

<b>Module Computer Science 2</b>	
Internal number	MKIB210
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	7.0 ECTS points, 6.0 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	Computer Science 1, Theoretical Computer Science
Pre-requisites according to the examination regulations	none
Competences	The students learn about basic algorithms and data structures. They can estimate in which situations specific and complex data types are used, how they work and how much time they take. They are able to prove the correctness of algorithms. In practical assignments the students are enabled to implement various algorithms and data structures.
Exams	Individual exams
<b>Lecture Computer Science 2</b>	
Internal number	MKIB211
Lecturers	Dipl.-Ing. Christian Meder Prof. Dr.-Ing. Holger Vogelsang
Scope	4.0 ECTS points, 4.0 Contact hours 120 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	This lecture consists of four parts. The first one introduces basic concepts of object oriented programming on the basis of the programming language Java. The main issues are among other things: Language elements of Java, data abstraction and encapsulation, inheritance, polymorphism, generic programming, error handling and runtime type information. Based on these techniques an introduction in modeling of class diagrams with UML is made. Additional practical exercises with a standard IDE deepen the knowledge. The second part introduces the development of mobile Apps with graphical user interfaces for Android. The third part of the lecture deals with some important data structures like lists, hashmaps, tree and graphs and introduces basic algorithms to operate on them. The fourth part introduces the modularization of applications with Spring.

Recommended reading	<p>On the lecture homepage: PowerPoint presentation, program examples, script Books:</p> <ul style="list-style-type: none"> <li>- Christian Ullenboom, Java ist auch eine Insel, Galileo Computing</li> <li>- R. Exams	Written Exam 120 Min. (graded)
Comments	Preparation of lecture contents and exam
<b>Lecture Computer Science 2 Exercise</b>	
Internal number	MKIB212
Lecturers	B.Sc. Manuel Vogel Dr. Martin Holzer Prof. Dr.-Ing. Holger Vogelsang
Scope	3.0 ECTS points, 2.0 Contact hours 90 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Exercise
Language of instruction	German
Content	The students solve Java and JavaScript exercises and model small applications using UML class diagrams.
Recommended reading	Script, compulsory and optional exercises on the homepage, solutions for optional exercises
Exams	Exercise 1 Semester (not graded)
Comments	Practical exercise with discussion of solutions

<b>Module Software Laboratory</b>	
Internal number	MKIB220
Coordinator	Prof. Dr. Martin Sulzmann
Scope	5.0 ECTS points, 4.0 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	Computer Science 1
Pre-requisites according to the examination regulations	none
Competences	<p>The students learn to apply the theoretical knowledge of "Informatik 2" using the programming language C++. They have design and implement projects with an increasing level of difficulty. The main topics are:</p> <ul style="list-style-type: none"> <li>- Practicing object oriented programming techniques</li> <li>- Preferring abstractions over concrete implementations</li> <li>- Modeling class and package diagrams before starting an implementation</li> <li>- Code quality assurance by writing automated tests</li> <li>- Teamwork</li> </ul>
Exams	Individual exams
<b>Lecture Software Laboratory</b>	
Internal number	MKIB221
Lecturers	Prof. Dr. Heiko Körner Prof. Dr. Christian Pape Prof. Dr. Martin Sulzmann
Scope	5.0 ECTS points, 4.0 Contact hours 150 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Laboratory Course
Language of instruction	German
Content	The students implement projects with an increasing complexity in C++. They have to use generic classes, inheritance, polymorphism, abstract classes and interfaces and concepts for error handling and detection like exceptions and assertions. Additionally they will learn to use elements of the STL and to model the classes and their relationships with UML.
Recommended reading	On the homepage: Project description with a step-by-step instruction, Java script, optional exercise with solutions, books: - Ulrich Breyman, C++ - Einführung und professionelle Programmierung, Hanser-Verlag
Exams	Laboratory Work 1 Semester (not graded)
Comments	Laboratory work

<b>Module Technologies of the Internet</b>	
Internal number	MKIB230
Coordinator	Prof. Dr. Christian Zirpins
Scope	5.0 ECTS points, 4.0 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	Computer Science 1
Pre-requisites according to the examination regulations	none
Competences	The two lectures on the topic of distributed systems ("Distributed Systems 1" and "Distributed Systems 2") teach both foundational and advanced principles that are illustrated through practical examples of existing paradigms and technologies. Principles treated in this course encompass foundations of goals and classes of distributed systems, as well as their architectures, processes, communication and name systems. Advanced principles include synchronisation, consistency and replicability, error-tolerance and security. The principles introduced in this course are exemplified through the paradigms of web-based systems and component-based systems. This includes sample implementations of individual principles. In addition, the course gives an introduction into the development of corresponding systems using actual technologies as examples.
Exams	Written Exam 120 Min. (graded)
<b>Lecture Distributed Systems 1</b>	
Internal number	MKIB231.a
Lecturer	Prof. Dr. Christian Zirpins
Scope	3.0 ECTS points, 2.0 Contact hours 90 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German

Content	<p>The course provides a practical introduction to the concepts and paradigms of distributed systems using the example of web technologies and application development on the web. This initially involves an introduction of the world wide web with basic protocols such as HTTP and other standards in the context of the Internet. After that an introduction to the design and construction of web applications is provided. This includes firstly the frontend development with HTML5, CSS3 as well as client-side JavaScript and secondly the backend development with server-side JavaScript on the Node.js platform. Interactions between frontend and backend follow modern REST/HTTP and AJAX techniques. In addition, mechanisms for personalization with cookies and sessions as well as to authenticate users are presented. The course closes with a detailed discussion of web application security.</p> <p>Upon completing this lecture class, students will acquire practical skills in the development and deployment of web applications, grounded in an understanding of distributed systems and web technologies. They will learn to proficiently use HTML5, CSS3, and JavaScript for frontend development, alongside server-side development with Node.js, enhancing their ability to create dynamic, full-stack web applications. Additionally, students will gain knowledge in implementing modern REST/HTTP and AJAX techniques for efficient frontend-backend communication, as well as in employing cookies, sessions, and authentication strategies for personalizing user experiences and ensuring application security. This comprehensive skill set will prepare students for a wide range of roles in web development and application design, equipping them with the necessary tools to address current and future challenges in the field.</p>

<b>Module Computer Engineering</b>	
Internal number	MKIB250
Coordinator	Prof. Dr. Christian Langen
Scope	7.0 ECTS points, 6.0 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	Students will learn the basic concepts of computer engineering. They learn the mathematical concepts of number representation and Boolean algebra, which are required for the analysis and design of hardware circuits. They understand how the basic digital computing elements are constructed and how to combine them into complex switching networks. Furthermore, the students will be able to explain the structure and operation of current standard circuits such as adders or shift registers. Additionally, students are familiar with internal functions of typical processors. They are able to implement the hardware related software parts using the "C" programming language including the use of typical peripherals. All knowledge gained is reinforced by practical work in the laboratory.
Exams	Individual exams
<b>Lecture Computer Engineering</b>	
Internal number	MKIB251
Lecturers	Prof. Dr. Dirk Hoffmann Prof. Dr. Christian Langen
Scope	4.0 ECTS points, 4.0 Contact hours 120 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	On the processor side, the lecture will cover the following, basic processor hardware, processor architecture, addressing modes, instructions, memory mapping, peripherals and bit processing. The special features of the programming languages C / C++ needed for hardware programming will also be covered.
Recommended reading	Powerpoint slide, personal notes, web based exercises and the suggested solution (provided upon request).
Exams	Written Exam 90 Min. (graded)
Comments	The student will be required to come prepared to participate in the lecture and will be expected to be able to develop a summary upon completion of the lecture, all exercises provided for reinforcement will be required to be individual work.

<b>Lecture Digital Technology Laboratory</b>	
Internal number	MKIB252
Lecturers	Prof. Dr. Dirk Hoffmann Prof. Dr. Albrecht Ditzinger
Scope	3.0 ECTS points, 2.0 Contact hours 90 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Laboratory Course
Language of instruction	German
Content	Lab experiments will be conducted using: - Digital Circuits - Microcontrollers - Peripherals - Timers and Counters
Recommended reading	Exercises, equipment provided and various manuals and other support material.
Exams	Exercise 1 Semester (not graded)
Comments	All laboratory work will be group work. It will include the conduct of the experiment, demonstration of the required result and be prepared to answer questions on the work and the results. Groups are on their own and are required to come to the laboratory prepared to conduct the exercise. Each group will prepare a final documentation of the exercise.

<b>Module System Software and System Programming</b>	
Internal number	MKIB310
Coordinator	Prof. Dr. Thomas Fuchß
Scope	9.0 ECTS points, 8.0 Contact hours
Placement	3rd Semester
Pre-requisites with regard to content	Computer Science 1, Computer Science 2, Software Laboratory, Theoretical Computer Science
Pre-requisites according to the examination regulations	none
Competences	
Exams	Individual exams
<b>Lecture System Software</b>

Lecturer	Prof. Dr. Thomas Fuchß
Scope	4.0 ECTS points, 4.0 Contact hours 120 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German

Content	<p>The course "System Software" covers the fundamental tasks and functionalities of modern operating systems and enables students to apply these techniques independently and systematically in teams to solve system-level development tasks. The course is divided into four main thematic areas:</p> <p>Fundamentals, Process Management, and Scheduling:</p> <ul style="list-style-type: none"> <li>- Understanding the relationship between computer architecture and operating systems.</li> <li>- Principles of processor virtualization and limited direct execution.</li> <li>- Scheduling algorithms (e.g., Round-Robin, Shortes-Job-First).</li> </ul> <p>File Systems and Persistence:</p> <ul style="list-style-type: none"> <li>- Requirements and differences in HDDs and SSDs.</li> <li>- Structure and implementation of file systems.</li> <li>- Concepts of free-space management and crash consistency.</li> </ul> <p>Memory Virtualization:</p> <ul style="list-style-type: none"> <li>- Principles of memory segmentation and paging.</li> <li>- Management of page frames and allocation strategies.</li> <li>- Mechanisms for isolation and memory management.</li> </ul> <p>Concurrency: Processes and Threads:</p> <ul style="list-style-type: none"> <li>- Introduction to threads.</li> <li>- Synchronization mechanisms: Mutexes, semaphores, condition variables, monitors.</li> <li>- Patterns for parallel and concurrent programming.</li> </ul> <p>In addition, the specific challenges of each topic are discussed, along with common strategies for addressing them. Practical exercises complement the lectures to facilitate the application of theoretical concepts to realistic scenarios.</p>
Recommended reading	<p>Slides, videos, textbooks, and other literature:</p> <ul style="list-style-type: none"> <li>- Arpaci-Dusseau, Remzi H.; Arpaci-Dusseau, Andrea C. Operating Systems: Three Easy Pieces, (V. 1.10) Arpaci-Dusseau Books, 2023</li> <li>- Tanenbaum, Andrew S.; Bos, H. Modern Operating Systems (4th Edition) – Pearson, 2014</li> <li>- Stallings, W. Operating Systems: Internals and Design Principles (8th Edition) – Pearson, 2014</li> </ul>
Exams	Written Exam 90 Min. (graded)
Comments	The lecture will take the form of seminars with exercises.
<b>Lecture System Programming</b>	
Internal number	MKIB312
Lecturer	Prof. Dr. Carsten Sinz
Scope	5.0 ECTS points, 4.0 Contact hours 150 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Laboratory Course
Language of instruction	German

Content	<p>The course is organized in three exercises, covering compiler construction and interprocess communication. Starting with a scanner, the students consolidate their skills in handling large dynamic data structures, pointers, and doing low level IO. The second exercise focuses on the development of a recursive descendent parser and a short introduction to semantic analysis and code generation. The third exercise is an introduction to the field of interprocess communication. Within the exercise, elementary techniques and concepts are trained:</p> <ul style="list-style-type: none"> <li>- generating processes / threads</li> <li>- terminating processes / threads</li> <li>- synchronizing processes / threads</li> </ul>
Recommended reading	<p>Slides and textbooks:</p> <ul style="list-style-type: none"> <li>- Eduard Glatz. Betriebssysteme: Grundlagen, Konzepte, Systemprogrammierung - dpunkt.verlag, 2010</li> <li>- A.V. Aho, M.S. Lam, R. Sethi und J.D. Ullman. Pre-requisites according to the examination regulations	none
Competences	
Exams	Individual exams
<b>Lecture Business Administration</b>	
Internal number	MKIB351
Lecturer	Prof. Dr. Uwe Haneke
Scope	4.0 ECTS points, 4.0 Contact hours 120 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	<p>Students are introduced to the fundamental concepts of general business administration. They learn about economic processes and interrelationships and become familiar with typical processes and requirements within companies. They are able to identify and outline the various areas of business administration.</p> <p>Using different tools and concepts, students can describe and analyze a company's situation.</p> <p>In addition, students are equipped to independently calculate and analyze key performance indicators that provide insights into a company's efficiency and effectiveness.</p> <p>In the Business Administration lecture, topics such as the economic environment (economics), business structures, organization, investment and financing, marketing, and accounting are covered in depth. This enables students to gain a comprehensive understanding of how a company operates and the resulting requirements.</p>

<b>Module Internship Preparation and Roundup</b>	
Internal number	MKIB4P0
Coordinator	Prof. Dr. Heiko Körner
Scope	6.0 ECTS points, 4.0 Contact hours
Placement	4th Semester
Pre-requisites with regard to content	Computer Science 1
Pre-requisites according to the examination regulations	Vorstudium
Competences	After completing this module, students will be able to handle important work-related skills that are also relevant for the practical semester. They can use the Scrum process model to manage projects and work in corresponding Scrum teams. They master techniques for the professional creation of scientific documents, can prepare data in a targeted manner and visualise their findings in an appealing way using modern presentation tools.
Exams	Individual exams
<b>Lecture Internship Preparation</b>	
Internal number	MKIB4P1
Lecturers	Dr. Martin Holzer B.Sc. Veit Richter
Scope	3.0 ECTS points, 2.0 Contact hours 90 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	This course deals with the general handling of MS Office products and gives specifically an introduction to the main functions of MS-Excel. Topics include input methods, formulas, chart depictions and search functions. Basic knowledge about the programming in VBA are also taught. These methods will also be used for macro skripts in MS-Word. Afterwards, the students have learned how to solve typicals problems efficiently with these today's standard programs.
Recommended reading	Exercises, programs with solutions and online documentation.
Exams	Exercise 1 Week (not graded)
Comments	Practical assignment in a computer laboratory.
<b>Lecture Internship Roundup</b>	
Internal number	MKIB4P2
Lecturers	Dipl. Wilnf. Lars Thoralf Thielemann Prof. Dr. Heiko Körner
Scope	3.0 ECTS points, 2.0 Contact hours 90 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture

Language of instruction	German
Content	<p>This lecture deals with the general handling of MS Office products and specifically provides an introduction to the most important functionalities of MS Excel. Students learn, for example, how to use input methods, formulae, diagrams and search functions. Basic knowledge of programming under VBA is also taught. These are then used to create macro scripts in MS Word.</p> <p>The focus is on the efficient use of MS Office products. Participating students are then able to quickly solve typical tasks.</p>
Recommended reading	Lecture notes
Exams	Exercise 1 Week (not graded)
Comments	The course consists of a lecture (50%) and supervised practical exercises (50%).

<b>Module Internship</b>	
Internal number	MKIB4PX0
Coordinator	Dr. Patrick Baier
Scope	24.0 ECTS points, 0.0 Contact hours
Placement	4th Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	Vorstudium
Competences	The internship is designed to deepen the previously acquired knowledge and skills by qualified collaboration in a larger project. The focus is on improving the technical competence and the development of social and personal skills. The student needs to assert himself as an independent member of the team. He becomes acquainted with new fields of duty and will become familiar with new tools. He learns to evolve himself and to assess his skills. The internship may be pursued in a company, in a research facility or an authority.
Exams	Individual exams
<b>Lecture Internship</b>

<b>Module Software Engineering and Distributed Systems 2</b>	
Internal number	MKIB510
Coordinator	Prof. Dr. Thomas Fuchß
Scope	8.0 ECTS points, 7.0 Contact hours
Placement	5th Semester
Pre-requisites with regard to content	Internship, Technologies of the Internet, Man-Machine-Communication 1, Computer Science 2, Databases and Communication Networks 1
Pre-requisites according to the examination regulations	Vorstudium
Competences	Having successfully completed the module, students are able to work productively and independently on software projects of various sizes. They will be able to analyze and structure tasks as well as develop solutions independently, justify their decisions and document them in a comprehensible manner. They also explain general concepts of architectures, especially for distributed software systems, and apply them constructively. Students recognize the central requirements and challenges of such systems and develop suitable solutions. They will be able to explain concepts such as modularity, communication, fault tolerance and security and incorporate them constructively into the development of comprehensive software systems. They have further developed their technical, social and personal skills as well as their communication skills and self-management. They have learned to apply these new skills in the context of software projects.
Exams	Written Exam 120 Min. (graded)
<b>Lecture Softwareengineering Laboratory</b>	
Internal number	MKIB511
Lecturer	Prof. Dr. Thomas Fuchß
Scope	3.0 ECTS points, 2.0 Contact hours 90 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Laboratory Course
Language of instruction	German
Content	In the Software Engineering Lab, students complete a full iterative software development process within a team. Starting with requirements analysis, they develop an analysis and design model and implement it in Java. Along the way, they actively engage with concepts such as use-case-driven development, architecture orientation, iterative and incremental approaches, and component-based software design. Through a concrete example project, students experience the practical application of these methods and learn to make independent design decisions while adhering to given requirements. The lab emphasizes teamwork and independent problem-solving, preparing participants to work effectively in agile development teams and address the challenges of complex software projects.

<b>Lecture Distributed Systems 2</b>	
Internal number	MKIB512.a
Lecturer	Prof. Dr. Christian Zirpins
Scope	3.0 ECTS points, 3.0 Contact hours 90 Stunden gesamt, davon 45 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German

Content	<p>The lecture conveys both fundamental and extended principles of distributed systems and illustrates these in practical form on the basis of concrete paradigms and technologies. The spectrum of principles covered includes fundamental aspects of the objectives and classes of distributed systems, as well as their architectures, processes, communications, and naming. Advanced principles include coordination, consistency and replication, fault tolerance and security. The covered principles are exemplified by various paradigms. Here, exemplary implementations of individual principles are presented. In addition, an introduction to the development of corresponding systems based on concrete software technologies is given.</p> <p>Upon completing this lecture class, students will achieve a comprehensive understanding of the principles underlying distributed systems, ranging from their fundamental objectives and architectures to advanced concepts such as coordination, consistency, replication, fault tolerance, and security. They will gain insights into the practical application of these principles through the examination of specific paradigms and technologies, enhancing their ability to analyze and design distributed systems. Moreover, the introduction to developing these systems using concrete software technologies will equip students with the practical skills necessary for implementing robust, efficient, and secure distributed systems in various computing environments.</p>

<b>Lecture Software Engineering</b>	
Internal number	MKIB512.b
Lecturer	Prof. Dr. Thomas Fuchß
Scope	2.0 ECTS points, 2.0 Contact hours 60 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German

Content	<p>The course "Software Engineering" builds on the practical experience students have gained during their internships and introduces techniques and methods for structured large-scale software development. The lecture begins with a review and consolidation of fundamental concepts such as objects, classes, associations, methods, inheritance, and polymorphism to ensure a solid understanding of the basics. It then focuses on the challenges of modern software development processes and structured approaches to address them effectively.</p> <p>Students learn how to integrate agile methodologies, such as Scrum, with established process models like the Unified Software Development Process to manage complex software projects. UML is introduced as a core modeling language to document development decisions and facilitate clear communication. Particular emphasis is placed on understanding the complexities of large-scale systems and applying structured methods and processes to address these challenges.</p> <p>Throughout the course, students develop the ability to work independently in agile environments, make informed development decisions, and document these decisions methodically. Theoretical concepts are complemented by practical examples that help bridge the gap between theory and real-world applications.</p> <p>In the associated lab, students apply the knowledge gained in the lecture to various example projects. They conduct the first iteration of a software development process, practicing teamwork, the use of agile methods, and professional documentation with UML.</p>

Placement	5th Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	Students will be able to independently apply the knowledge they have acquired in their previous studies to a complete task. They can analyse the problem, create a solution concept, find an implementation and implement it on their own. They can also write down their results observing scientific standards. They can also present their work in a short presentation and defend it in a subsequent discussion.
Exams	Individual exams
<b>Lecture Student Research Projekt</b>	
Internal number	MKIB541
Lecturer	Alle Dozenten
Scope	4.0 ECTS points, 4.0 Contact hours 120 Stunden gesamt, davon 60 Stunden Kontaktstudium.
Type/mode	Hands-on Experience
Language of instruction	German
Content	A student research project deals with a topic in the field of software or hardware. The aim is to carry out a practical task, but work in the areas of evaluation or literature research is also possible. Students analyse the task and research which tools are best suited to solve it. They then use these accordingly. Comprehensive documentation must be prepared for the project work, covering all steps of the task and its completion (e.g. the exact problem definition, the concept, the implementation, operating instructions and more). A joint colloquium concludes the project work. The students show their results in a short presentation and then take part in a discussion. The project work is thus a preparation for the later final thesis, which the students will write according to very similar guidelines.

Exams	Verbal Exam 20 Min. (graded)
Comments	All work will be individual work and will include the presentation, discussion, defense of the work.

<b>Module ERP Systems</b>	
Internal number	MKIB550
Coordinator	Prof. Dr. rer. pol. Mathias Philipp
Scope	7.0 ECTS points, 6.0 Contact hours
Placement	5th Semester
Pre-requisites with regard to content	Business Administration
Pre-requisites according to the examination regulations	Vorstudium
Competences	The students shall learn to think in business processes on the basis of integrated ERP systems. They should recognize the interdependence of operational functions, and thus deepen their basic economical knowledge about processes (horizontal integration). Further, the students recognize the need for vertical integration as a prerequisite for the development of ERP systems for management information systems. In addition the students learn architecture, design and development of ERP systems.
Exams	Written Exam 90 Min. (graded)
<b>Lecture ERP Systems</b>	
Internal number	MKIB551.a
Lecturer	Prof. Dr. rer. pol. Mathias Philipp
Scope	3.0 ECTS points, 3.0 Contact hours 90 Stunden gesamt, davon 45 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	Contents: ERP basics, system integration, system architectures, and logistics: Distribution (SD), Materials Management (MM), Production Planning and Control (PP) as well as Financial Accounting (FI) and Controlling (CO). In addition, an overview is given to the software selection.
Recommended reading	Recommended reading: Lecture material completely as PowerPoint documents, blackboard notes for interactive development of central problem positions, a main textbook to ERP, a main textbook to SAP ECC 6.0.
Exams	Module exam
Comments	Kind of work: Lecture participation
<b>Lecture IT Service Management</b>	
Internal number	MKIB551.b
Lecturer	Prof. Dr. rer. pol. Mathias Philipp
Scope	2.0 ECTS points, 2.0 Contact hours 60 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German

Content	<p>The lecture covers the core processes of IT service management as well as methods for systematic planning, provision and support of IT services. For each process, the objectives, tasks, demarcation, mode of operation and the dependencies on the other processes are worked out. The students thus acquire the competence to know the relevant technical terms and to apply them in practical situations.</p> <p>The necessary roles and responsibilities are learned. The students understand how IT processes are represented in reference models. The lecture is based on the IT Infrastructure Library (ITIL), which is a generally accepted standard for the structure and operation of IT organizations.</p>
Recommended reading	<p>Lecture material as PowerPoint slides</p> <p>Blackboard notes for interactive development of core problems</p> <p>Numerous multiple-choice questions on each process in ILIAS</p>
Exams	Module exam
Comments	
<b>Lecture ERP Laboratory</b>	
Internal number	MKIB552
Lecturer	Prof. Dr. rer. pol. Mathias Philipp
Scope	<p>2.0 ECTS points, 1.0 Contact hours</p> <p>60 Stunden gesamt, davon 15 Stunden Kontaktstudium.</p>
Type/mode	Laboratory Course
Language of instruction	German
Content	<p>The laboratory is linked to the lecture and serves to apply and deepen the lecture material.</p> <p>The following laboratory exercises are carried out:</p> <ul style="list-style-type: none"> <li>- SAP ERP navigation, case study to get to know the user interface and operation of the SAP system</li> <li>- Case study on order processing (SD module) to understand the implementation of business processes in complex ERP systems</li> <li>- Customizing case study on reorder point-oriented procurement planning to independently (under supervision) configure a procurement process in the system (company and process customizing)</li> <li>- Short programming task in ABAP to get to know the programming language.</li> </ul> <p>Independent processing of the case studies in an SAP ERP system individually or in a group of a maximum of two people. Software: SAP ECC 6.04, data basis: Global Bike Inc.</p> <p>Alternative to the laboratory: Introduction to the ABAP programming language. See I W918.</p>
Recommended reading	<p>Recommended reading: Extensive material for introduction to the topic as well as on each case study. Provisioning is about the blended learning and e-learning platform ILIAS.</p>

Exams	Exercise 1 Semester (not graded)
Comments	Kind of work: Labor participation and preparation of laboratory results. Exercises and case studies from the curriculum GBI powered by the SAP University Alliances community. Some case studies have been extended to more detailed tasks.

<b>Module Embedded Software</b>	
Internal number	MKIB610
Coordinator	Prof. Dr. Dirk Hoffmann
Scope	5.0 ECTS points, 4.0 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Computer Science 1, Computer Science 2, Computer Engineering
Pre-requisites according to the examination regulations	Modul Internship
Competences	The lectures in this module impart advanced knowledge in the field of embedded systems. Students know the basic terms in the field of embedded systems and are able to differentiate between different types of real-time systems. With CAN bus, the students have become familiar with a typical communication medium and with CDMA technology, an important coding used, for example, in satellite communication. Students are able to implement typical programming tasks in the field of embedded systems in the C language. During the course, students learn how to use software tools that can be used to measure and optimize the program runtime of the software created.
Exams	Individual exams
<b>Lecture Embedded Software</b>	
Internal number	MKIB611
Lecturer	Prof. Dr. Dirk Hoffmann
Scope	2.0 ECTS points, 2.0 Contact hours 60 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	Students will be able to understand the fundamental concepts of software development for embedded real-time systems. In the context of this lecture, embedded systems are all computers controlled by software that are part of a larger system and whose primary function is not computing. Real-time systems also involve aspects of temporal behavior, i.e., they are systems that not only have to provide a correct answer, but also have to calculate the system answer within a predetermined and guaranteed period of time. In detail, topics from the following areas are covered: design and architecture of automotive control units, fundamentals of real-time programming, coding for data transmission, embedded C. The participants of the lecture apply their knowledge on the basis of exercises.
Recommended reading	Slides, blackboard, exercise sheets
Exams	Written Exam 90 Min. (graded)
Comments	Lecture
<b>Lecture Embedded Software Laboratory</b>	

Internal number	MKIB612
Lecturer	Prof. Dr. Dirk Hoffmann
Scope	3.0 ECTS points, 2.0 Contact hours 90 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Laboratory Course
Language of instruction	German
Content	Students will be able to develop typical algorithms used in embedded systems in the C++ programming language. Students will develop a prototypical CDMA decoder that is able to extract the bits sent by GPS satellites from a composite signal.
Recommended reading	Software and hardware tools für designing automative ECUs
Exams	Exercise 1 Semester (not graded)
Comments	Practical work

<b>Module Man-Machine-Communication 2</b>	
Internal number	MKIB620
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	6.0 ECTS points, 6.0 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Computer Graphics, Computer Science 1, Computer Science 2, Media Design, Media Project, Man-Machine-Communication 1, Software Engineering and Distributed Systems 2, Software Laboratory
Pre-requisites according to the examination regulations	none
Competences	This module integrates different media technologies. The students will be able to write user interfaces for rich fat clients and mobile media applications. They learn how computer vision works and how computer vision ist used in media applications.
Exams	Verbal Exam 20 Min. (graded)
<b>Lecture Graphical User Interfaces</b>	
Internal number	MKIB621.a
Lecturer	Prof. Dr. Matthias Wölfel
Scope	3.0 ECTS points, 2.0 Contact hours 90 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	The lecture first deals with SWT/JFace and the Eclipse Rich Client Platform 4 (RCP), which uses SWT and JFace as its basis. The most important topics are the model-view-controller pattern, layout management and event handling using the observer pattern. Based upon this techniques advanced technologies like the separation of business logic and user interface code using data binding and dialog control are presented. Other topics are internationalization and multithreading in the context of user interfaces. The last part of the lecture shows the declarative construction of user interfaces and the application of the RCP framework.

Recommended reading	Books and Web sites: - Marc Teufel, "Eclipse 4", entwickler.press, Oktober 2012 - Lars Vogel, "Eclipse 4 Application Development", Mai 2012 - M. Exams	Module exam
Comments	Lecture preparation, exam preparation, implementing the bonus exercise, 30% of the lecture is held as a computer exercise
<b>Lecture App-Programming</b>	
Internal number	MKIB621.b
Lecturer	Prof. Dr. Matthias Wölfel
Scope	1.0 ECTS points, 2.0 Contact hours 30 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Exercise
Language of instruction	German
Content	The lecture teaches the construction of mobile media applications. The main concepts are discussed using the Android platform. In a first part, the basic technologies and limitations of mobile devices are shown. The second part examines different development strategies like native applications, device independent abstractions and web applications. A main part of the lecture is the integration of different media types into mobile applications and the constraints the developer has to keep in mind.
Recommended reading	will be announced
Exams	Module exam
Comments	Lecture with exercise
<b>Lecture Computer Vision</b>	
Internal number	MKIB622
Lecturer	Prof. Dr.-Ing. Astrid Laubenheimer
Scope	2.0 ECTS points, 2.0 Contact hours 60 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German

Content	
Recommended reading	
Exams	Written Exam 90 Min. (graded)
Comments	

<b>Module Communication Competence</b>	
Internal number	MKIB630
Coordinator	Prof. Dr. rer. pol. Mathias Philipp
Scope	7.0 ECTS points, 6.0 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Internship
Pre-requisites according to the examination regulations	Modul Internship
Competences	The student should learn how a common, computer science-related content will be refurbished for a specific group of audiants. Additionnally he should have learned how to give his presentation and defend it.
Exams	Individual exams
<b>Lecture Seminar</b>	
Internal number	MKIB631
Lecturer	Alle Dozenten
Scope	6.0 ECTS points, 6.0 Contact hours 180 Stunden gesamt, davon 90 Stunden Kontaktstudium.
Type/mode	Seminar
Language of instruction	German
Content	Each participant of the seminar creates under the guidance of a supervising faculty staff a written report in housework. The contents of the report should be computer science related. Based on the report suitable presentation techniques (slides, video sequences, programmed examples) are selected. Each participant individually presents his report followed by a discussion. The seminar topics are classified into thematic groups. Besides the technical problem the student has to learn how to do 'self-marketing'. The assessment of the student is based on the following criteria: degree of difficulty, quality of written preparation; didactically skillful presentation.
Recommended reading	Depends on the topic
Exams	Homework 1 Semester (not graded)
Comments	Meetings with the faculty supervisor; eventually experimental studies, literature refurbishment; presenting the work-out; defend the own presentation; active participation in discussing the presentations of others.
<b>Lecture Presentation</b>	
Internal number	MKIB632
Lecturer	Alle Dozenten
Scope	1.0 ECTS points, 0.0 Contact hours 30 Stunden gesamt, davon 0 Stunden Kontaktstudium.
Type/mode	Seminar

Language of instruction	German
Content	
Recommended reading	
Exams	Presentation 20 Min. (graded)
Comments	

<b>Module Key Qualification</b>	
Internal number	MKIB640
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	6.0 ECTS points, 6.0 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Language Competence
Pre-requisites according to the examination regulations	Modul Internship, <= 4; siehe § 43-I/b (7)
Competences	On successful completion of the module, students will be able to <ul style="list-style-type: none"> <li>- behave appropriately towards people from other cultures in relation to the increasing globalisation of their work,</li> <li>- understand statements made by these people,</li> <li>- understand simple legal issues and contracts,</li> <li>- present the results of their own work in the form of a specialised presentation.</li> </ul>
Exams	Individual exams
<b>Lecture Intercultural Communication</b>	
Internal number	MKIB641
Lecturer	Prof. Dr. Andrea Cnyrim
Scope	2.0 ECTS points, 2.0 Contact hours 60 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	English
Content	Participants learn to understand intercultural competence as a strategic competitive factor and to organise their own actions in a culturally appropriate way: <ul style="list-style-type: none"> <li>- Key aspects of intercultural communication (e.g. culturally determined norms, behaviours, values, verbal and non-verbal communication) with particular emphasis on differences between fact-oriented cultures such as Germany and relationship-oriented cultures such as China and India</li> <li>- Influence of different cultural standards on international business relationships (e.g. business initiation, negotiations, employee management, decision-making, conflict resolution, etc.)</li> <li>- Empirical studies (e.g. Geert Hofstede, Fons Trompenaars etc.)</li> <li>- Case studies from different cultural areas (e.g. Germany, France, USA, Japan, China, India, etc.).</li> </ul>
Recommended reading	
Exams	Exercise 1 Semester (not graded)

Content	The course focuses on fundamental object-oriented design methods with an emphasis on design patterns and model driven concepts. The students learn to recognize, to know when to use, and to apply design patterns in varying situations in the context of an evolutionary development process. Furthermore the ability of an axiomatic rule base application of patterns, within a model driven approach, are discussed.

Scope	2.0 ECTS points, 2.0 Contact hours 60 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German

Content	<p>Starting with clarifying the terminology of business process management, the lecture gives an introduction and analysis of various concepts for business process documentation and modeling. This includes a discussion of support through appropriate methodologies and software tools. Modern concepts such as process mining are also covered.</p> <p>Using different tools, business processes are documented and subsequently simulated as part of a case study. Finally, aspects of process quality assurance, performance evaluation, and process cost accounting are addressed. Students are enabled to independently handle processes in a business environment, including documentation, modeling, and analysis.</p> <p>Overview:</p> <ul style="list-style-type: none"> <li>- The concept of processes and types of processes</li> <li>- Methodologies in process management</li> <li>- Process analysis (documenting processes)</li> <li>- Process modeling (modifying processes)</li> <li>- Tools for process modeling</li> <li>- Process simulation</li> <li>- Process mining</li> <li>- Key performance indicators for evaluating business processes</li> </ul>

Language of instruction	German

Content	<p>TERP10: SAP ERP - Integration of Business Processes is a 10-day training course held at the universities participating in the pilot project. The students learn how the fundamental integrative business processes in procurement, production, planning, project management, sales, customer service, asset management, financial accounting, human resources, and analytics interact within the SAP ERP application.</p> <p>The course provides students with a broad basic knowledge of the core business processes, business interrelations, and integration of business processes in SAP ERP.</p> <p>At the end of the course, students take a certification examination. If they pass the examination, they receive an SAP certificate, which is a fully recognized qualification in the industry.</p>

Content	The lecture teaches the construction of mobile media applications. The main concepts are discussed using the Android platform. In a first part, the basic technologies and limitations of mobile devices are shown. The second part examines different development strategies like native applications, device independent abstractions and web applications. A main part of the lecture is the integration of different media types into mobile applications and the constraints the developer has to keep in mind.

Scope	2.0 ECTS points, 2.0 Contact hours 60 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	<p>In this course, students learn about the basic principles and technologies of mobile communication systems. After completing the course, they will be able to describe problems of mobile networks such as wireless signal transmission, media access and mobility management, identify and apply solution modules to solve these problems and evaluate existing solutions. They will also be able to analyze the characteristics and applications of various wireless systems such as WLAN, Bluetooth, mobile radio technologies (e.g. GSM, UMTS, LTE, 5G) and their underlying protocols and architectures.</p> <p>The lecture covers the following topics:</p> <ul style="list-style-type: none"> <li>- Basics of mobile communication: wireless signal transmission, multiplexing techniques, band spreading, OFDM, MIMO and multipath propagation.</li> <li>- Media access: methods such as Aloha, Carrier Sense Multiple Access (CSMA) and time-slot-based protocols.</li> <li>- Mobility management: position management, handover and routing in mobile networks.</li> <li>- Technologies and standards: WLAN (IEEE 802.11), Bluetooth, mobile networks (GSM, UMTS, LTE, 5G).</li> </ul> <p>The course is held in a flipped classroom format. Students prepare for the live sessions independently using lecture slides and explanatory videos. In the classroom sessions, the content is deepened through case studies and practical exercises. The examination consists of an oral examination or a written exam, depending on the agreement.</p> <p>The total workload is 60 hours, of which 20 hours are spent on asynchronous learning, 20 hours on face-to-face events and 20 hours on exam preparation.</p>

Content	Emotional expressions are important signals for people to make sense of situations, actions and relationships in their social interactions with each other. Is the empowerment of technological systems with the capacity to also sense and express emotions able to improve their users' interactions with them? This question is the driving force behind the field of Affective Computing. The students know different theories of emotions, contrast them with each other and debate them. They apply the acquired knowledge by addressing problems from within the primary areas of application for Affective Computing through the development of prototypical interactive systems that are capable of sensing or expressing emotions.

Type/mode	Lecture
Language of instruction	German

Content	<p>The lecture Big Data Engineering addresses the systematic construction of data-intensive systems. Generic architectural approaches are introduced in order to design robust, performant and scalable data systems for various applications. For different architectural areas various kinds of data storage and processing models are discussed. Topics include, among others, distributed file systems, serialization, batch and stream processing with MapReduce and other programming models, queuing mechanisms and NoSQL databases. These are both conceptually described as well as implemented by means of exemplary tools and techniques. The focus is on established industry standards such as Apache Thrift, Hadoop, Kafka, Cassandra, Storm. These are illustrated by means of an exemplary Web Analytics application.</p> <p>During the course students acquire, among others, the following abilities:</p> <ul style="list-style-type: none"> <li>- They evaluate different approaches of data systems for given application problems with specific requirements.</li> <li>- They describe structure and function of specific architectural approaches for Big Data systems.</li> <li>- They categorize tools and techniques for Big Data systems and utilize them professionally.</li> <li>- They design architecture and data models as well as processing logic and queries for given Big Data applications and implement these based on specific open source tools and techniques.</li> </ul>
Recommended reading	<ul style="list-style-type: none"> <li>- Nathan Marz, James Warren, "Big Data: Principles and best practices of scalable realtime data systems", Manning, 2015, ISBN: 1-617290-34-3</li> <li>- Martin Kleppmann, "Designing Data-Intensive Applications", O'Reilly, 2014 (Early Release), ISBN: 978-1-4493-7332-0</li> <li>- Tom White, "Hadoop: the definitive guide: storage and analysis at internet scale", 4. ed., O'Reilly, 2015, ISBN: 978-1-491-90163-2</li> <li>- Michael Frampton, "Big Data Made Easy: A Working Guide to the Complete Hadoop Toolset", Apress, 2015, ISBN: 978-148-420-094-0</li> <li>- Vivek Mishra, "Beginning Apache Cassandra Development", Apress, 2014, ISBN: 978-148-420-142-8</li> <li>- Additional literature will be announced during the lecture</li> </ul>

<b>Module Selected Chapters Computer Science/Media/Communication 2</b>	
Internal number	MKIB710
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	8.0 ECTS points, 8.0 Contact hours
Placement	7th Semester
Pre-requisites with regard to content	Internship Preparation and Roundup, Internship
Pre-requisites according to the examination regulations	§43 (4)
Competences	The student should be able to lay his emphasis on individual interests. He can choose up to four subjects from the following list <ul style="list-style-type: none"> <li>- Autonomous Systems Lab</li> <li>- Multimedia Studies (Blended Learning)</li> <li>- Project Management</li> <li>- Quality Assurance</li> <li>- Teamteaching</li> </ul>
Exams	Individual exams
<b>Lecture Autonomous Systems Labor</b>	
Internal number	I W276
Lecturers	Dipl. Inf. (FH) Oktavian Gniot Prof. Dr. Norbert Link
Scope	2.0 ECTS points, 2.0 Contact hours 60 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Project Lecture
Language of instruction	German
Content	Project 1: Implementation of an image-processing-based handling system, which performs transport activities on the basis of information extracted from a digital video camera Project 2: Implementation of the core functionality of an aircraft docking guidance system, which directs aircraft to their respective stopping position at the airport gate Project 3: Autonomous navigation, obstacle avoidance and object following with robots
Recommended reading	Lecture notes, task descriptions, project guidelines and FAQs, all accessible via the internet. Handbooks and relevant literature is available on site and for homework in the library.
Exams	Laboratory Work 1 Week (graded)
Comments	Theoretical familiarisation, practical work, reporting, partly as self-responsible work
<b>Lecture Software Quality</b>	
Internal number	I W392

Lecturer	Prof. Dr. Dirk Hoffmann
Scope	2.0 ECTS points, 2.0 Contact hours 60 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Lecture
Language of instruction	German
Content	Students gain practical access to the field of software quality assurance. They work on a specific chapter from the field of software quality assurance and present their results to the other students in a series of short presentations. The participants then discuss the results.

<b>Lecture Softwareengineering Special Chapters</b>	
Internal number	I W701
Lecturer	Prof. Dr. Peter Henning

Scope	2.0 ECTS points, 2.0 Contact hours 60 Stunden gesamt, davon 30 Stunden Kontaktstudium.
Type/mode	Seminar
Language of instruction	German
Content	The course focuses on fundamental object-oriented design methods with an emphasis on design patterns and model driven concepts. The students learn to recognize, to know when to use, and to apply design patterns in varying situations in the context of an evolutionary development process. Furthermore the ability of an axiomatic rule base application of patterns, within a model driven approach, are discussed.

Type/mode	Hands-on Experience
Language of instruction	German

Content	<p>This course enables students to obtain ECTS credits for social work done at Karlsruhe University of Applied Sciences. The activity must be closely coordinated with a professor of the faculty. This can be, for example, support for the O-Phase or support for visually impaired students. In the case of the O-Phase, you will usually have to work on two semesters in order to achieve the required minimum number of hours.</p> <p>If you are interested, you can also obtain the "Certificate of International and Intercultural Competence (CIIC)". It certifies the intercultural competences and foreign language skills acquired during the degree programme, provides evidence of study-related experiences abroad and lists the framework in which the participants have been involved in intercultural activities. To earn the CIIC, you must cover three of four subject areas. The main component in subject area 1 is the voluntary commitment of at least 50 hours (about 2 hours per week in one semester), which can be completed in institutions or projects with an international and/or intercultural connection. In addition to the commitment, you will attend an introductory event as well as a reflection workshop and prepare an experience report, which is necessary to pass the subject area. If you have any questions about the certificate, please contact the Center of Competence: <a href="https://www.h-ka.de/ciic">https://www.h-ka.de/ciic</a></p> <p>Through the Center of Competence, it is also possible to obtain the "Certificate for Social Engagement (ZGE)". It takes into account an even wider range of opportunities to get involved. Find your suitable area, whether it is community, social, cultural or ecological engagement. Your social engagement should comprise at least 100 time hours and last for at least one year. In addition to your commitment, you will attend various seminars from the Studium Generale (a total of 8 ECTS) to link your practical experience with theoretical knowledge. This certificate cannot be recognised as an elective subject. You can find more information here: <a href="https://www.h-ka.de/zge">https://www.h-ka.de/zge</a></p> <p>At regular intervals, the Center of Competence offers introductory events and reflection workshops for HKA students who are involved in voluntary work outside of their studies. This gives them the opportunity to exchange their experiences as volunteers with other participants and learn to reflect on and classify the insights they have gained. The next dates can be found on the CIIC website.</p>

Language of instruction	German
Content	Students work independently on a practical problem using scientific and practical methods. Topics include the independent development of the methodology, the topic and the exact problem as well as the structure of the paper and the creation of a bibliography. The results are discussed and presented with the lecturers. The students thus learn the procedure for writing the final Bachelor's thesis.

Exams	Exercise 1 Month (not graded)
Comments	

<b>Module Thesis</b>	
Internal number	MKIB730
Coordinator	Prof. Dr. Heiko Körner
Scope	12.0 ECTS points, 0.0 Contact hours
Placement	7th Semester
Pre-requisites with regard to content	System Software and System Programming, Business Administration, Computer Graphics, Databases and Communication Networks 1, Databases and Communication Networks 2, ERP Systems, Embedded Software, Computer Science 1, Computer Science 2, Communication Competence, Mathematics 1, Mathematics 2, Media Design, Media Project, Man-Machine-Communication 1, Man-Machine-Communication 2, Internship, Internship Preparation and Roundup, Student Research Project, Key Qualification, Software Engineering and Distributed Systems 2, Software Laboratory, Language Competence, Computer Engineering, Technologies of the Internet, Theoretical Computer Science, Scientific Working
Pre-requisites according to the examination regulations	Modul Internship, <= 4; siehe § 43-I/b (7); Min. 120 CP aus dem Hauptstudium
Competences	After successfully completing this module, students are able to independently solve a practical problem or research task using scientific methods within a specified period of time. They can structure the task, check dependencies, collect the necessary resources and then work on the task using a specially derived schedule. They can present the written results in an appealing form.
Exams	Individual exams
<b>Lecture Thesis</b>	
Internal number	MKIB731
Lecturer	Alle Professoren
Scope	12.0 ECTS points, 0.0 Contact hours 360 Stunden gesamt, davon 0 Stunden Kontaktstudium.
Type/mode	Thesis
Language of instruction	German
Content	In the final thesis, students work independently on a practical problem or research task within a specified period of time using scientific methods. They structure the task, check dependencies, collect the necessary resources and work on the problem according to a timetable. The written thesis summarises the results in a didactically meaningful way and meets academic standards.
Recommended reading	Suitable for the task as agreed
Exams	Bachelor Thesis 4 Months (graded)

<b>Module Final examination</b>	
Internal number	MKIB740
Coordinator	Prof. Dr. Heiko Körner
Scope	3.0 ECTS points, 0.0 Contact hours
Placement	7th Semester
Pre-requisites with regard to content	Mathematics 1, Mathematics 2, Media Design, Media Project, Man-Machine-Communication 1, Man-Machine-Communication 2, Internship, Internship Preparation and Roundup, Student Research Project, Key Qualification, Software Engineering and Distributed Systems 2, Software Laboratory, Language Competence, Computer Engineering, Technologies of the Internet, Theoretical Computer Science, Scientific Working, Thesis, System Software and System Programming, Business Administration, Computer Graphics, Databases and Communication Networks 1, Databases and Communication Networks 2, ERP Systems, Embedded Software, Computer Science 1, Computer Science 2, Communication Competence
Pre-requisites according to the examination regulations	Modul Internship
Competences	Participation in this module enables students to convincingly present the results achieved within a specialised, application-related thesis to an expert audience. They can analyse the content of such work, select the key aspects and present these in a didactically appropriate short presentation. In a subsequent discussion, they are also able to defend their results.
Exams	Individual exams
<b>Lecture Final examination</b>	
Internal number	MKIB741
Lecturer	Alle Professoren
Scope	3.0 ECTS points, 0.0 Contact hours 90 Stunden gesamt, davon 0 Stunden Kontaktstudium.
Type/mode	Colloquium
Language of instruction	German
Content	The final examination covers all topics relevant to computer science in the main study programme. Students demonstrate that they have understood and can apply interdisciplinary contexts. They answer questions from various areas of media informatics that are related to their final thesis. With the final examination, they demonstrate that they have the competence to independently work on novel problems in the field of media informatics.
