Hochschule Karlsruhe

Faculty for Computer Science and Business Information Systems

Module manual

Course of studies Media and Communication Computer Science (Bachelor), ER 4

Winter semester 2022/2023

Module Media and Communication Computer Science (Bachelor), ER 4

Computer Science 1	3
Media Design	5
Mathematics 1	7
Language Competence	9
Computer Science 2	11
Software Project	13
Technologies of the Internet	15
Computer Engineering	19
Mathematics 2	21
System Software	22
Databases and Communication Networks 1	24
Media Project	27
Man Machine Communication 1	28
Business Administration and IT Service Management	30
Internship Preparation and Roundup	32
Internship	34
Software Engineering and Distributed Systems 2	35
Databases and Communication Networks 2	39
Computer Graphics and Computer Vision	40
Student Research Project	42
Elective courses 1	44
Embedded Software	51
Man Machine Communication 2	53
Communication Competence	55
Key Qualification	57
Elective courses 2	59
Elective courses 3	70
Scientific Working	77
Thesis	78
Final Examination	79

Module Computer Science 1	
Internal number	MKIB1104
Coordinator	Prof. Dr. Patrick Baier
Scope	12 ECTS points, 12 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	The courses of this module teach the students fundamental programming and algorithmic skills. The students should be enabled to analyze small problems, find solutions to these problems, and develope them in the Java programming language.
Exams	Written Exam 120 Min. (graded)
Lecture Computer Science 1	
Internal number	MKIB1114.a
Lecturer	Prof. Dr. Ulrich Bröckl
Scope	5 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	With weekly exercises the students deepen the practical contents of the lecture on the computer. They use an integrated Java development environment to create, test and modify programs. In the following exercises the students program simple calculations with Java using variables, expressions and control structures. This also includes graphical data processing tasks. Later, the students develop object-oriented programs on the computer. In the end, they solve recursive problems and implement solution strategies with the help of backtracking.
Recommended reading	Selected exercises with solutions, slides in PDF format, Java programs and their documentation as Javadoc. Supplementary Java exercises with solutions to deepen the programming skills.
Exams	Module exam
Comments	Lecture participation. Solving simple exercises in the lecture with teacher support.
Lecture Theoretical Computer Science	
Internal number	MKIB1114.b
Lecturer	Prof. Dr. Heiko Körner
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture

Language of instruction	German
Content	This course gives an introduction to the theory of formal languages. The Chomsky hierarchy will serve as a model to classify these languages by their computational complexity. Modern computers are represented by finite state automatons, showing theier principal limits. The students also learn how to apply several proof techniques. The lecture include the following areas of theoretical computer science: mathematical logic, formal languages, proof techniques, the O-calculus, finite automata, regular languages and expressions, the Chomsky hierarchy, the pumping lemma for regular and context-free languages and the minimization of finite automata by the theorem of Myhill-Nerode. Furthermore, the course covers pushdown automata, the CYK algorithm and closure properties of regular and context-free languages.
Recommended reading	The substance of the lecture will be discussed at the blackboard. Lecture notes containing the complete material are also available. Furthermore, there are sample solutions to all exercises. Literature: D. W. Hoffmann: Theoretische Informatik, 3. Auflage. Hanser, 2015. M. Sipser: Introduction to the Theory of Computation, 3rd edition. Cengage Learning, Inc., 2012.
Exams	Module exam
Comments	This course will take place as a pure lecture. Numerous exercises deepen selected areas and will be discussed in tutorials.
Lecture Computer Science 1 Exercise	
Internal number	MKIB1124
Lecturer	Prof. Dr. Ulrich Bröckl
Scope	3 ECTS points, 4 Contact hours
Type/mode	Exercise
Language of instruction	German
Content	With weekly exercises the students deepen the practical contents of the lecture on the computer. They use an integrated Java development environment to create, test, and modify programs. In the following exercises the students program simple calculations with Java using variables, expressions and control structures. This also includes graphical data tasks. Later, the students develop object-oriented programs on the computer. In the end, they solve recursive problems and implement solution strategies with the help of backtracking.
Recommended reading	
Exams	Exercise 1 Semester (not graded)
Comments	Practical assignment in a computer laboratory.

Module Media Design	
Internal number	MKIB1204
Coordinator	Prof. Thomas Hinz
Scope	7 ECTS points, 6 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	
Exams	Individual exams
Lecture Media Design	
Internal number	MKIB1214
Lecturer	Prof. Thomas Hinz
Scope	3 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The students become acquainted with the theoretical foundations of media design. This includes knowledge about creativity techniques, design rules and gestalt principles, systems of organisation, micro- and macro typography, colour theory, logos/pictograms/icons as well as grid systems for layouts. Additionally, they gain insights into analog and digital photography and the conception and design of digital media content exemplified through web applications. The students explore the history of design, starting at the dawn of industrialisation and including the seminal design movements of the 19th and 20th centuries as well as contemporary trends in design. This overview enables students to categorise and evaluate different design styles, allowing an integration of the acquired knowledge into their own design processes.

Module Mathematics 1	
Internal number	MKIB1304
Coordinator	Prof. Dr. Frank Schaefer
Scope	8 ECTS points, 6 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	Participants learn the mathematical basics from linear algebra, which are often used in computer science. These basics are specifially needed in computer graphics, robotic, cryptography.
Exams	Individual exams
Lecture Mathematics 1	
Internal number	MKIB1314
Lecturer	Prof. Dr. Frank Schaefer
Scope	5 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The participants should learn basic knowledge of mathematics and especially of linear algebra and acquire the methods to solve smaller mathematical tasks by themselves. In the part on linear algebra we will focus on knowledge needed in computer grafic and 3D simulations. Content of the lectures: Proof methods, relations, euqivalence relations, modulo-calculation, Euklid's algorithm, functions, operations, groups, rings, fields, polynomial rings, finite fields, interpolation, vector spaces, basis, dimension, linear equations, rank, Gauß-Jordan-algorithm, determinant, matrices, linear map, inverse matrices, rotation, translation, scaling, scalarproduct, norm, vectorproduct, orthogonal matrizen, eigenvalues, eigenvectors, homogeneous coordinates.
Recommended reading	Own writings from the blackboard, Exercises and summaries from the internet, Textbook: Peter Stingl: Mathematik für Fachhochschulen, Hanser Verlag, 8. Auflage, 2009, ISBN-10: 3-446-42065-7
Exams	Written Exam 90 Min. (graded)
Comments	Lecture, Exercises, Summary of the solutions in the lecture, Tutorials for further assistance
Lecture Mathematics 1 Laboratory	
Internal number	MKIB1324
Lecturer	Prof. Dr. Frank Schaefer
Scope	3 ECTS points, 2 Contact hours
Type/mode	Laboratory Course

Language of instruction	German
Content	Improving the knowledge of the related lectures, basics in computer-algebra systems, mathematical problem solving with computer assistance. With the help of the computer algebra system Maple different, applied mathematical questions from the fields of geometry, curves, interpolation and linear equations will be solved. It will be focussed on matrices and homogenous coordinates, which are an important foundation for computer grafic.
Recommended reading	Short introduction will be given. Exercises distributed in the classes and also available on the internet.
Exams	Exercise 1 Semester (not graded)
Comments	Exercises in the labs with Maple (instructor will be present).

Module Language Competence	
Internal number	MKIB1404
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	4 ECTS points, 4 Contact hours
Placement	1st Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	The learning of a foreign language is an integral component of the in the course of studies communicated key qualification.
Exams	Individual exams
Lecture Foreign Languages	
Internal number	MKIB1414
Lecturer	Mehrere Dozenten
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	English
Content	After a grading test students can deepen their English skills to three grades. The entry level requires the competence grade A2 (basic user) in the six-stage common European reference framework. The first two grades (English for advanced learners 1 and 2) engage besides a recapitulation of grammar mainly in issues of job-oriented common language and cultural studies, e.g. job application letters, descriptions of products and services, business telephone calls, progress of formal and informal conferences, presentations etc. The thus achieved grade complies with 173 points in the TOEFL (computer-based) or the competence grade B2 (independent user) of the European reference framework. In the following grade special language skills (English for science and technics) are leant: In business English the priority is on spoken language and small study groups. At the beginning of the semester each group founds its own company which advances dynamically during the course of the semester. At the same time vocabulary and phrasing in respect of topics like company structures, meetings, negotiation, marketing, production and sale, finances, comprehending of reports and presentations are gone through in order to make the attendees handle the language instruments to cope with each step of the simulation in English. The highlights of the course are a simulated exhibition, a hiring procedure and the group presentation. In technical English the priority is on the learning and practice of a technical basis vocabulary and typical expressions of technical communication.
Recommended reading	Literature depends on grade, PowerPoint presentations, execises, Videos, DVDs
Exams	Written Exam 120 Min. (graded)

Comments	Lecture participation, short talks, discussions

Module Computer Science 2	
Internal number	MKIB2104
Coordinator	Prof. Dr. Christian Pape
Scope	6 ECTS points, 6 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	Informatik 1
Pre-requisites according to the examination regulations	none
Competences	The module is based on module "Informatik 1". The students will learn to develop a computer science project using object oriented techniques in Java. They become acquainted with advanced analysis, design and realization competences as well as abstract data types and their implementation by data structures and algorithms. The students will learn to choose an appropriate data type depending on the application area and the given runtime conditions. Furthermore they will be familiar with graphical user interfaces and object-based programming with JavaScript.
Exams	Individual exams
Lecture Computer Science 2	
Internal number	MKIB2114
Lecturer	Prof. Dr. Christian Pape
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	This lecture consists of four parts. The first one introduces basic concepts of object oriented programming on the basis of the programming language Java. The main issues are among other things: Language elements of Java, data abstraction and encapsulation, inheritance, polymormism, generic programming, error handling an runtime typ information. Based on these techniques an introduction in modeling of class diagrams with UML is made. Additional practical exercises with a standard IDE adeepen the knowledge. The second part introduces the development of mobile Apps with graphical user interfaces for Android. The third part of the lecture deals with some important data structures like lists, hashtables, tree and graphs and introduces basic algorithms to operate on them. The forth part introduces the modularization of applications with Spring.

Recommended reading	On the lecture homepage: PowerPoint presentation, program examples, script Books: - Christian Ullenboom, Java ist auch eine Insel, Galileo Computing - R. C. Martin, Clean Code, mitp - B. Lahres, G. Raýman, Objektorientierte Programmierung, Galileo Computing - G. Popp, Konfigurationsmanagement mit Subversion, Maven und Redmine, dpunkt - M. Jeckle, C. Exams	Written Exam 120 Min. (graded)
Comments	Preparation of lecture contents and exam

Lecture Computer Science 2 Exercise

Internal number	MKIB2124
Lecturers	Dr. Martin Holzer Prof. Dr. Christian Pape
Scope	2 ECTS points, 2 Contact hours
Type/mode	Exercise
Language of instruction	German
Content	The students solve Java and JavaScript exercises and model small applications using UML class diagrams.
Recommended reading	Script, compulsory and optional exercises on the homepage, solutions for optional exercises
Exams	Exercise 1 Semester (not graded)
Comments	Practical exercise with discussion of solutions

Module Software Project	
Internal number	MKIB2204
Coordinator	Prof. Dr. Martin Sulzmann
Scope	5 ECTS points, 4 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	Informatik 1
Pre-requisites according to the examination regulations	none
Competences	The students learn to apply the theoretical knowledge of "Informatik 2" using the programming language C++. They have design and implement projects with an increasing level of difficulty. The main topics are: - Practicing object oriented programming techniques - Preferring abstractions over concrete implementations - Modeling class and package diagrams before starting an implementation - Code quality assurance by writing automated tests - Teamwork
Exams	Individual exams
Lecture Software Project	
Internal number	MKIB2214
Lecturer	Prof. Dr. Martin Sulzmann
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The students implement projects with an increasing complexity in C++. They have to use generic classes, inheritance, polymorphism, abstract classes and interfaces and concepts for error handling and detection like exceptions and assertions. Additionally they will learn to use elements of the STL and to model the classes and their relationships with UML.
Recommended reading	On the homepage: Project description with a step-by-step instruction, Java script, optional exercise with solutions, books: - Ulrich Breymann, C++ - Einführung und professionelle Programmierung, Hanser-Verlag
Exams	Written Exam 90 Min. (graded)
Comments	Laboratory work

Exams	Exercise 1 Semester (not graded)
Comments	

Module Technologies of the Internet	
Internal number	MKIB2304
Coordinator	Prof. Dr. Christian Zirpins
Scope	7 ECTS points, 6 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	Informatik 1
Pre-requisites according to the examination regulations	none
Competences	The two lectures on the topic of distributed systems ("Distributed Systems 1" and "Distributed Systems 2") teach both foundational and advanced principles that are illustrated through practical examples of existing paradigms and technologies. Principles treated in this course encompass foundations of goals and classes of distributed systems, as well as their architectures, processes, communication and name systems. Advanced principles include synchronisation, consistency and replicability, error-tolerance and security. The principles introduced in this course are exemplified through the paradigms of web-based systems and component-based systems. This includes sample implementations of individual principles. In addition, the course gives an introduction into the development of corresponding systems using actual technologies as examples.
Exams	Individual exams
Lecture Distributed Systems 1	
Internal number	MKIB2314
Lecturer	Prof. Dr. Christian Zirpins
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The course provides a practical introduction to the concepts and paradigms of distributed systems using the example of web technologies and application development on the web. This initially involves an introduction of the world wide web with basic protocols such as HTTP and other standards in the context of the Internet. After that an introduction to the design and construction of web applications is provided. This includes firstly the frontend development with HTML5, CSS3 as well as client-side JavaScript and secondly the backend development with server-side JavaScript on the Node.js platform. Interactions between frontend and backend follow modern REST/HTTP and AJAX techniques. In addition, mechanisms for personalization with cookies and sessions as well as to authenticate users are presented. The course closes with a detailed discussion of web application security.

Recommended reading	- Semmy Purewal, "Learning Web App Development", O'Reilly, 1. Auflage, 2014 - David Gourley, Brian Totty, "HTTP: The Definite Guide", O'Reilly, 2002 - Mark Pilgrim, "HTML5 Up and Running", O'Reilly, 2010 (Online: http://diveintohtml5.info) - Marijn Haverbeke, "Eloquent JavaScrip", No Starch Press, 2014 (Online: http://eloquentjavascript.net) - Peter Gasston, "The Book of CSS3 - A Developer's Guide to the Future of Web Design", 2nd Edition, No Starch Press, 2014 - Andy Budd, Emil Björklund, "CSS Mastery", Third Edition, Apress, 2016 (Online verfügbar im Hochschulnetz) - Ethan Brown, "Web development with Node and Express", O'Reilly, 2014 - Robert Prediger ; Ralph Winzinger, "Node.js : Professionell hochperformante Software entwickeln", Hanser, 2015 (Online verfügbar im Hochschulnetz) - Additional literature will be announced during the lecture
Exams	Written Exam 90 Min. (graded)
Comments	In preparation for individual lecture units, the self-study of basic content is required by means of the accompanying literature (relevant chapters will be announced in the event). Further independent work concerns the follow-up of the lecture contents and the exam preparation.
Lecture New Lecture	
Internal number	MKIB2324
Lecturer	Prof. Dr. Christian Zirpins
Scope	2 ECTS points, 1 Contact hours
Type/mode	Laboratory Course
Language of instruction	German
Content	The lab course covers the practical application of various basic web technologies. The selection of technologies follows the topics of the VS1 lecture. In the laboratory, a complete web application is created in several steps. Each step takes a closer look at a range of web technologies. This will specifically promote skills in understanding and applying Web technologies including the areas of declarative languages such as HTML, CSS, and JSON, client-side and server-side JavaScript programming, and special technologies for single-page applications and REST architectures.

Recommended reading	- Semmy Purewal, "Learning Web App Development", O'Reilly, 1. Auflage, 2014 - David Gourley, Brian Totty, "HTTP: The Definite Guide", O'Reilly, 2002 - Mark Pilgrim, "HTML5 Up and Running", O'Reilly, 2010 (Online: http://diveintohtml5.info) - Marijn Haverbeke, "Eloquent JavaScrip", No Starch Press, 2014 (Online: http://eloquentjavascript.net) - Oliver Ochs, "JavaScript für Enterprise-Entwickler, Professionell programmieren im Browser und auf dem Server", dpunkt, 2012 - Peter Gasston, "The Book of CSS3 - A Developer's Guide to the Future of Web Design", 2nd Edition, No Starch Press, 2014 - Andy Budd, Emil Björklund, "CSS Mastery", Third Edition, Apress, 2016 (Online verfügbar im Hochschulnetz) - Ethan Brown, "Web development with Node and Express", O'Reilly, 2014 - Robert Prediger ; Ralph Winzinger, "Node.js : Professionell hochperformante Software entwickeln", Hanser, 2015 (Online verfügbar im Hochschulnetz) - Additional literature will be announced during the lecture
Exams	Laboratory Work 1 Semester (not graded)
Comments	Basic knowledge of general programming and declarative web languages is required (the latter can be obtained by a limited self-study of the accompanying literature). The course includes 50% supervised presence time (1 SWS) in the LKIT lab and 50% individual work. Proof of achievement is provided by presentation and defense of the solution.
Lecture Interfacedesign	
Internal number	MKIB2334
Lecturer	Prof. Daniel Schwarz
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	This course provides students with the theoretical and applied knowledge about the creation of media-based web applications. This includes the foundations of the markup language HTML and Cascading Style Sheets, how to embed different types of media, as well as the conception, design and programming of responsive web applications.
Recommended reading	Lecture notes, slides (PDF), multiple examples of programs
Exams	Concept 1 Semester (graded)
Comments	Preparation of lecture contents and exam
Lecture Interfacedesign Excercise	
Internal number	MKIB2344
Lecturer	Prof. Daniel Schwarz
Scope	1 ECTS points, 1 Contact hours
Type/mode	Exercise
Language of instruction	German

Content	
Recommended reading	
Exams	Exercise 1 Semester (not graded)
Comments	

Module Computer Engineering	
Internal number	MKIB2404
Coordinator	Prof. Dr. Matthias Wölfel
Scope	5 ECTS points, 4 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	Students will learn the basic concepts of computer engineering. They learn the mathematical concepts of number representation and Boolean algebra, which are required for the analysis and design of hardware circuits. They understand how the basic digital computing elements are constructed and how to combine them into complex switching networks. Furthermore, the students will be able to explain the structure and operation of current standard circuits such as adders or shift registers. Additionally, students are familiar with internal functions of typical processors. They are able to implement the hardware related software parts using the "C" programming languege including the use of typical peripherals. All knowledge gained is reinforced by practical work in the laboratory.
Exams	Individual exams
Lecture Computer Engineering	
Internal number	MKIB2414
Lecturer	Prof. Dr. Matthias Wölfel
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	On the processor side, the lecture will cover the following, basic processor hardware, processor architecture, addressing modes, instructions, memory mapping, peripherals and bit processing. The special features of the programming languages C / C++ needed for hardware programming will also be covered.
Recommended reading	Powerpoint slide, personal notes, web based exercises and the suggested solution (provided upon request).
Exams	Written Exam 90 Min. (graded)
Comments	The student will be required to come prepared to participate in the lecture and will be expected to be able to develop a summary upon completion of the lecture, all exercises provided for reinforcement will be required to be individual work.
Lecture Digital Technology Laboratory	
Internal number	MKIB2424

Lecturer	Prof. Daniel Schwarz
Scope	3 ECTS points, 2 Contact hours
Type/mode	Laboratory Course
Language of instruction	German
Content	Lab experiments will be conducted using: - Digital Circuits - Microcontrollers - Peripherals - Timers and Counters
Recommended reading	Exercises, equipment provided and various manuals and other support material.
Exams	Exercise 1 Semester (not graded)
Comments	All laboratory work will be group work. It will include the conduct of the experiment, demonstration of the required result and be prepared to answer questions on the work and the results. Groups are on their own and are required to come to the laboratory prepared to conduct the exercise. Each group will prepare a final documentation of the exercise.

Module Mathematics 2	
Internal number	MKIB2504
Coordinator	Prof. Dr.-Ing. Astrid Laubenheimer
Scope	7 ECTS points, 6 Contact hours
Placement	2nd Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	none
Competences	
Exams	Written Exam 120 Min. (graded)

Lecture System Software Laboratory	
Internal number	MKIB3124
Lecturer	Prof. Dr. Carsten Sinz
Scope	3 ECTS points, 2 Contact hours
Type/mode	Laboratory Course
Language of instruction	German
Content	The course is organized in three exercises, covering compiler construction and interprocess communication. Starting with a scanner, the students consolidate their skills in handling large dynamic data structures, pointers, and doing low level IO. The second exercise focuses on the development of a recursive descendent parser and a short introduction to semantic analysis and code generation. The third exercise is an introduction to the field of interprocess communication. Within the exercise, elementary techniques and concepts are trained: - generating processes / threads - terminating processes / threads - synchronizing processes / threads

Recommended reading	Slides and textbooks: - Eduard Glatz. Betriebssysteme: Grundlagen, Konzepte, Systemprogrammierung - dpunkt.verlag, 2010 - A.V. Aho, M.S. Lam, R. Sethi und J.D. Ullman. Compiler - Prinzipien, Techniken und Werkzeuge - 2nd Edition - München: Pearson Studium, 2008. - D. Grune et. al. Modern compiler design - Wiley, 2000. - Andrew S. Tanenbaum. Exams	Laboratory Work 1 Semester (not graded)
Comments	Attended teamwork and three lectures.

Module Databases and Communication Networks 1	
Internal number	MKIB3204
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	7 ECTS points, 7 Contact hours
Placement	3rd Semester
Pre-requisites with regard to content	Informatik 1, Informatik 2
Pre-requisites according to the examination regulations	none
Competences	The students know the current models of communication and database technology and are able to classify and evaluate unknown, e.g. new systems. They are familiar with the advantages and disadvantages of different architectures and will be considered when selecting the architecture for their own products. In the database area, they are largely familiar with the SQL-92 standard and are able to select, set up and safely operate database systems. The students are able to analyze given facts, to transfer these facts into a normalized data model, to create this data model under SQL and to use the resulting SQL databases under object-oriented languages. In the field of communication networks, students know the individual layers of the TCP/IP layer model and understand the tasks and service models of each layer. They can characterize and compare different protocols of each layer. They can analyze the requirements of a given application, select the most suitable protocols for that application, and combine them into a functioning network stack. You can also use the client-server approach and socket programming techniques to solve your own problems.
Exams	Written Exam 120 Min. (graded)
Lecture Databases 1	
Internal number	MKIB3214.a
Lecturer	Prof. Dr.-Ing. Holger Vogelsang
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	Introduction to information systems, basics of database systems, database organization, data models, database schema, architecture: 3-layer model, client-server architecture, language interfaces: SQL92 (queries, DDL, DML), SQL:2003 (object-oriented extensions, NF2), JDBC, recovery and transactions, ERM, mapping of entities and relationships to relational data models, normalization, OR mapping.

Recommended reading	- Script - Example databases of the lecture for the common database systems - Exercises - Sample programs - Collection of old exams and their solutions - Edwin Schicker, "Datenbanken und SQL", Springer Vieweg, 2017, ISBN: 978-3834817327 - Gunter Saake, Kai-Uwe Sattler, "Datenbanken - Konzepte und Sprachen", mitp, 2013, ISBN: 978-3286694530

Lecture Communication Networks 1

Internal number	MKIB3214.b
Lecturer	Prof. Dr. Oliver P. Waldhorst
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	Distributed systems; data transmission and communication networking techniques (circuit/packet switching); Serial / Parallel, fault detection-/protection mechanisms; service and protocol specification; flow control; negotiating qualities of service; multiplexing; time charts and finite state machines as a means of describing protocols; OSI reference model (Layers, protocols, services), protocol-stacks; the physical layer: analog and digital transmission, transmission media, STP/UDP, ISDN, xDSL; the data link layer: character and bitorientierte protocols (BSC, HDLC), Local area networks (LAN e.g.ETHERNET, Token Ring), topology, access procedures; the network layer: connection oriented and connectionless services, routing, congestion control; the transport layer: transport layer classes; RPC; socketprogramming; TCP / IP; the application system: Internet, services and protocols in the Internet environment (Telnet, FTP , SMTP, SNMP, DNS, Web, HTML / HTTP);
Recommended reading	• Word handouts • Tanenbaum: Computer Networks, Pearson Studies, 2003 (german edition) • Collection of old exams and their solutions
Exams	Module exam
Comments	Lecture supported by transparencies and Power Point Slides. Student questions are welcome. In parallel to the lecture the participants should control their knowledge using the old exams and their solutions (available on the server).

Lecture Databases 1 Laboratory

Internal number	MKIB3224
Lecturers	M.Sc. Amir Bukhari Prof. Dr.-Ing. Holger Vogelsang
Scope	2 ECTS points, 2 Contact hours

Type/mode	Exercise
Language of instruction	German
Content	The knowledge learned in "Databases 1" is deepened and practiced in group work. The interaction of a database with a higher programming language (Java) is understood. The use of SQL (DCL; DML; DDL), transactions and isolation levels and the avoidance of deadlocks is mastered. A database application for warehouse management will be designed and prototypically implemented. This includes the setup of a DB schema, the design and testing of SQL queries, the use of transactions and transaction levels as well as the programming of queries and transactions with Java using JDBC based on Oracle (the preparation for the laboratory should be done in PostgreSQL or MySQL). Finally, several given verbal facts are analyzed, transferred to an Entity Relationship model, normalized, transferred to a physical schema and finally created in SQL. Finally, the handling of the OR mapper Hibernate is practiced. Translated with www.DeepL.com/Translator

Internal number	MKIB3404
Coordinator	Prof. Dr. Ulrich Bröckl
Scope	5 ECTS points, 3 Contact hours
Placement	3rd Semester
Pre-requisites with regard to content	Informatik 1
Pre-requisites according to the examination regulations	none
Competences	The courses of this module teach the students fundamental programming and algorithmic skills. The students should be enabled to analyze small problems, find solutions to these problems, and develope them in the Java programming language. By means of periodic evening events they get basic understanding of association work, concretely the work of the Usability Professionals' Association (UPA).

Module Internship Preparation and Roundup	
Internal number	MKIB4P04
Coordinator	Prof. Dr. Heiko Körner
Scope	6 ECTS points, 4 Contact hours
Placement	4th Semester
Pre-requisites with regard to content	Informatik 1
Pre-requisites according to the examination regulations	Vorstudium
Competences	The students improve their vocational skills which are also important for the internship. Topics include managing projects, time and cost planning. The students will lean how to use standard software like the MS-Office products for evaluating calculations and presenting them attractively. In addition to that, macro skripts will be taught to solve recurring problems.
Exams	Individual exams
Lecture Internship Preparation	
Internal number	MKIB4P14
Lecturers	Dr. Martin Holzer Dr. Matthias Richter
Scope	3 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	This course deals with the general handling of MS Office products and gives specifically an introduction to the main functions of MS-Excel. Topics include input methods, formulas, chart depictions and search functions. Basic knowledge about the programming in VBA are also taught. These methods will also be used for macro skripts in MS-Word. Afterwards, the students have learned how to solve typicals problems efficiently with these today's standard programs.
Recommended reading	MS-PowerPoint slides, an accompanying script for reference, exercises.
Exams	Exercise 1 Week (not graded)
Comments	The course consists of of a lecture (50%) and supervised, practical exercises (50%).
Lecture Internship Roundup	
Internal number	MKIB4P24
Lecturers	Prof. Dr. Heiko Körner Dipl. WiInf. Lars Thoralf Thielemann
Scope	3 ECTS points, 2 Contact hours
Type/mode	Exercise
Language of instruction	German

Content	This course aims to systematically reflect the internship done by each student and especially to advise them with their written assignments to be submitted. To this end, we will discuss the entire process of scientific writing, address each particular step in more detail, and deduce general guidelines towards a smooth implementation into practice. Furthermore, this course provides a thorough introduction to the use of LaTeX, a typesetting system widespread throughout the scientific community.
Recommended reading	- Slides provided by lecturer, individual notes taken by students - General literature on scientific writing (e.g., "Writing scientific English" by Tim Skerns) - General literature / online tutorials on the LaTeX typesetting system
Exams	Exercise 1 Week (not graded)
Comments	Students are expected to attend this course regularly and to actively take part in discussions and practical lab exercises. To pass this course, they must further submit their written assignment by the end of the course (meeting the demands specified by the lecturer in the first session).

Module Internship	
Internal number	MKIB4PX4
Coordinator	Prof. Dr. Thomas Fuchß
Scope	24 ECTS points, 0 Contact hours
Placement	4th Semester
Pre-requisites with regard to content	none
Pre-requisites according to the examination regulations	Vorstudium
Competences	The internship is designed to deepen the previously acquired knowledge and skills by qualified collaboration in a larger project. The focus is on improving the technical competence and the development of social and personal skills. The student needs to assert himself as an independent member of the team. He becomes acquainted with new fields of duty and will become familiar with new tools. He learns to evolve himself and to assess his skills. The internship may be pursued in a company, in a research facility or an authority.
Exams	Individual exams
Lecture Internship	
Internal number	MKIB4PX14
Lecturer	Prof. Dr. Thomas Fuchß
Scope	24 ECTS points, 0 Contact hours
Type/mode	On-the-job Training
Language of instruction	German
Content	The project must include at least 95 days presence and a relevantly application in computer science using modern technologies. There are to create an internship report and an experience report. The supervising company grants a work certificate. By the university of applied sciences each student is assigned a mentor. The task of the mentor is to monitor the quality of training detail.
Recommended reading	The material depends on the task and is made available by the supervising company.
Exams	Hands-on Work 95 Days (not graded)
Comments	Participation in a larger project

Module Software Engineering and Distributed Systems 2	
Internal number	MKIB5104
Coordinator	Prof. Dr. Thomas Fuchß
Scope	7 ECTS points, 7 Contact hours
Placement	5th Semester
Pre-requisites with regard to content	Datenbanken und Kommunikationsnetze 1, Informatik 2, Mensch-Maschine-Kommunikation 1, Praxistätigkeit, Technologien des Internets
Pre-requisites according to the examination regulations	none
Competences	The students learn how to work independently and productively in large software projects. This includes the decomposing of development tasks as well as the determination and assessment of appropriate architectures. They are able to capture the necessary steps in the context of a given task, to structure and clarify their decisions using suitable tools and methodologies, independently. In this context, the students also gain the ability to recognize and classify goals and problems of distributed software systems. They can explain the general concepts of architectures, processes, communication, naming, coordination, replication fault tolerance and security, and apply them to the construction of distributed software services and applications.
Exams	Written Exam 120 Min. (graded)

Lecture Software Engineering	
Internal number	MKIB5114.a
Lecturer	Prof. Dr. Thomas Fuchß
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The course "software engineering" concentrates on methods and techniques for the structured development of large software systems. Beyond the repetition of well-known object oriented concepts, the focus lies on establishing the fundamentals of modern and agile software development process. Based on their experiences made during internship, the students discover the real challenges associated to such a development process. The lecture is accompanied by a course-project, to gain experiences in practice. This covers agile and component based development techniques, containing requirement engineering, analysis, and design as well as a prototypical implementation of the software system in java.

Exams	Module exam
Comments	The lecture will take the form of seminars with exercises.

Lecture Distributed Systems 2

Internal number	MKIB5114.b
Lecturer	Prof. Dr. Christian Zirpins
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The lecture conveys both fundamental and extended principles of distributed systems and illustrates these in practical form on the basis of concrete paradigms and technologies. The spectrum of principles covered includes fundamental aspects of the objectives and classes of distributed systems, as well as their architectures, processes, communications, and naming. Advanced principles include coordination, consistency and replication, fault tolerance and security. The covered principles are exemplified by various paradigms. Here, exemplary implementations of individual principles are presented. In addition, an introduction to the development of corresponding systems based on concrete software technologies is given.

Exams	Module exam
Comments	Autonomous work includes pre- and post processing of lectures, exercises and exam preparation.
Lecture Softwareengineering Laboratory	
Internal number	MKIB5124
Lecturer	Prof. Dr. Thomas Fuchß
Scope	2 ECTS points, 2 Contact hours
Type/mode	Laboratory Course
Language of instruction	German
Content	Accompanying the software engineering lecture this course project covers a complete step in a modern software development process. Beginning with requirement engineering and analysis, central use cases are designed and finally implemented in Java. By this students learn more than facts, they get experiences and they understand the meaning of terms like architecture-oriented, iterative, incremental, or component-based.
Recommended reading	Slides, textbooks, and other literature: - Craig Larman. Applying UML and Patterns: An Introduction to Object-Oriented Analysis and Design and Iterative Development, 3. ed. - Upper Saddle River, NJ: Prentice Hall, 2004. - I. Jacobson, G. Comments	Attended teamwork
Lecture Distributed Systems 2 Laboratory	
Internal number	MKIB5134
Lecturer	Prof. Dr. Christian Zirpins
Scope	1 ECTS points, 1 Contact hours
Type/mode	Laboratory Course
Language of instruction	German

Content	The lab provides practical insights into the functioning and construction of distributed information systems. To this end, current paradigms are taken up and fundamental principles are examined in the context of exemplary realizations. The lab tasks are based on the contents of the lecture, but also address current topics of industrial research and development. The practical implementation is done under utilization of modern industry-relevant platforms and frameworks.
Recommended reading	- Andrew S. Tannenbaum, Marten van Steen, "Verteilte Systeme, Prinzipien und Paradigmen", 2. aktualisierte Auflage, Pearson Studium, 2008, ISBN 978-3-8273-7293-2 - George Coulouris, Jean Dollimore, Tim Kindberg, Gordon Blair, "Distributed Systems, Concepts and Design", Fifth Edition, Addison-Wesley, 2012, ISBN 978-0-13-214301-1 - Additional literature will be announced during the lecture
Exams	Laboratory Work 1 Semester (not graded)
Comments	Basic knowledge of programming, operating systems and databases is required. The course includes 50% supervised presence time (1 SWS) in the LKIT lab and 50% individual work. Proof of achievement is provided by presentation and defense of the solution.

Internal number	I W503
Lecturer	Dipl.Design. Heike Biscosi
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German

Content	User Research - methods all around fictitious and real users, to to establish a "human centered approach" in projects. Teaching contents are methods which contribute to a better understanding of people and their usage contexts, to improve the development, design and evaluation of interactive products and systems. Following topics - in theory and praxis - will be part of the seminar: - Creative and qualitative research methods, such as target group analysis, mental models, persona design, persona-moodboard, job stories, cultural probes, user diaries, focus groups, interviews, scenarios and storyboards, user journeys, acceptance and usability testings. - Basic principles of different quantitative methods: survey and questionnaire design, descriptive statistics, laboratory-based studies, experimental studies. - Evaluation of quantitative methods, as described in research reports.
Recommended reading	- Lecture notes, - Case studies from practice, - further literature references will be given in the lecture.
Exams	Homework 1 Semester (graded)

Lecture ERP Systems with Laboratory	
Internal number	I W551
Lecturer	Prof. Dr. rer. pol. Mathias Philipp
Scope	4 ECTS points, 4 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	Contents: ERP basics, system integration, system architectures, and logistics: Distribution (SD), Materials Management (MM), Production Planning and Control (PP) as well as Financial Accounting (FI) and Controlling (CO). In addition, an overview is given to the software selection.
Recommended reading	Recommended reading: Lecture material completely as PowerPoint documents, blackboard notes for interactive development of central problem positions, a main textbook to ERP, a main textbook to SAP ECC 6.0.
Exams	Written Exam 90 Min. (graded)
Comments	Kind of work: Lecture participation
Lecture Embedded Software	
Internal number	I W611
Lecturer	Prof. Dr. Dirk Hoffmann
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German

Content	The lecture introduces software development methods for embedded real time systems. Embedded systems within the meaning of this lecture are systems that are controlled by computer software and are part of a larger system whose primary function is not compute-oriented. For real-time systems, the result has to be computed within a specified time frame. In particular, topics from the following areas are covered: Design and architecture of automotive ECUs, bus architectures, data transmission encodings, Embedded C.
Recommended reading	Slides, blackboard, exercise sheets

Type/mode	Lecture
Language of instruction	German
Content	Emotional expressions are important signals for people to make sense of situations, actions and relationships in their social interactions with each other. Is the empowerment of technological systrms with the capacity to also sense and express emotions able to improve their users' interactions with them? This question is the driving force behind the field of Affective Computing. The students know different theories of emotions, contrast them with each other and debate them. They apply the acquired knowledge by addressing problems from within the primary areas of application for Affective Computing through the development of prototypical interactive systems that are capable of sensing or expressing emotions.

Lecture Big Data Engineering

Internal number	I W926
Lecturer	Prof. Dr. Christian Zirpins
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The lecture Big Data Engineering addresses the systematic construction of data-intensive systems. Generic architectural approaches are introduced in order to design robust, performant and scalable data systems for various applications. For different architectural areas various kinds of data storage and processing models are discussed. Topics include, among others, distributed file systems, serialization, batch and stream processing with MapReduce and other programming models, queuing mechanisms and NoSQL databases. These are both conceptually described as well as implemented by means of exemplary tools and techniques. The focus is on established industry standards such as Apache Thrift, Hadoop, Kafka, Cassandra, Storm. These are illustrated by means of an exemplary Web Analytics application. During the course students acquire, among others, the following abilities: - They evaluate different approaches of data systems for given application problems with specific requirements. - They describe structure and function of specific architectural approaches for Big Data systems. - They categorize tools and techniques for Big Data systems and utilize them professionally. - They design architecture and data models as well as processing logic and queries for given Big Data applications and implement these based on specific open source tools and techniques.

Comments	Independent work relates to the preparation and followup of lectures, laboratory exercises and exam preparation.

Lecture Digital Transformation & digital marketing

Internal number	I W929
Lecturers	Marc Steinmetz Prof. Thomas Hinz
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	
Recommended reading	
Exams	Homework 1 Semester (graded)
Comments	

Module Embedded Software	
Internal number	MKIB6104
Coordinator	Prof. Daniel Schwarz
Scope	5 ECTS points, 4 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Informatik 1
Pre-requisites according to the examination regulations	Modul Internship
Competences	The courses of this module teach the students the fundamental concepts about embedded systems. Students know the basic terminology about embedded systems and they are able to distinguish different types of real-time systems from each other. By studying the CAN bus technology, students get to know a typical communication medium and acquain with the CDMA technology an important coding scheme for data transmission. Students are able to implement typical programming tasks in the field of embedded systems in C. Furthermore, students learn how to deal with software tools that are suited for analyzing and developing embedded systems.
Exams	Individual exams
Lecture Embedded Software	
Internal number	MKIB6114
Lecturer	Prof. Daniel Schwarz
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The lecture introduces software development methods for embedded real time systems. Embedded systems within the meaning of this lecture are systems that are controlled by computer software and are part of a larger system whose primary function is not compute-oriented. For real-time systems, the result has to be computed within a specified time frame. In particular, topics from the following areas are covered: Design and architecture of automotive ECUs, bus architectures, data transmission encodings, Embedded C.
Recommended reading	Slides, blackboard, exercise sheets
Exams	Concept 1 Semester (graded)
Comments	Lecture
Lecture Embedded Software Laboratory	
Internal number	MKIB6124
Lecturer	Prof. Daniel Schwarz
Scope	3 ECTS points, 2 Contact hours
Type/mode	Exercise

Language of instruction	German
Content	With the help of the modeling tool CANoe the participants design a control unit in the field of automotive electronics. The project also includes tasks from the field of signal decoding.
Recommended reading	Software and hardware tools für designing automative ECUs
Exams	Exercise 1 Semester (not graded)
Comments	Practical work

Module Man Machine Communication 2	
Internal number	MKIB6204
Coordinator	Prof. Dr. Matthias Wölfel
Scope	6 ECTS points, 4 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Computergrafik und Computer Vision, Informatik 1, Informatik 2, Mediengestaltung, Medienprojekt 1, Mensch-Maschine-Kommunikation 1, Softwareengineering und Verteilte Systeme, Softwareprojekt
Pre-requisites according to the examination regulations	Modul Internship
Competences	This module integrates different media technologies. The students will be able to write user interfaces for rich fat clients and mobile media applications. They learn how computer vision works and how computer vision ist used in media applications.
Exams	Individual exams
Lecture Intuitive and Perceptive User Interfaces	
Internal number	MKIB6214
Lecturer	Prof. Dr. Matthias Wölfel
Scope	3 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	The lecture first deals with SWT/JFace and the Eclipse Rich Client Platform 4 (RCP), which uses SWT and JFace as its basis. The most important topics are the model-view-controller pattern, layout management and event handling using the observer pattern. Based upon this techniques advanced technologies like the separation of business logic and user interface code using data binding and dialog control are presented. Other topics are internationalization and multithreading in the context of user interfaces. The last part of the lecture shows the declarative construction of user interfaces and the application of the RCP framework.

Exams	Written Exam 90 Min. (graded)
Comments	Lecture preparation, exam preparation, implementing the bonus exercise, 30% of the lecture is held as a computer exercise

Lecture Intuitive and Perceptive User Interfaces Exercise	
Internal number	MKIB6224
Lecturer	Prof. Dr. Matthias Wölfel
Scope	3 ECTS points, 2 Contact hours
Type/mode	Exercise
Language of instruction	German
Content	The lecture teaches the construction of mobile media applications. The main concepts are discussed using the Android platform. In a first partt, the basic technologies and limitations of mobile devices are shown. The second part examins different development strategies like native applications, device independend abstractions and web applications. A main part of the lecture is the integration of different media types into mobile applications and the constraints the developer has to keep in mind.
Recommended reading	will be announced
Exams	Exercise 1 Semester (not graded)
Comments	Leacture with exercise

Module Communication Competence	
Internal number	MKIB6304
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	6 ECTS points, 6 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Praxistätigkeit
Pre-requisites according to the examination regulations	Modul Internship
Competences	The student should learn how a common, computer science-related content will be refurbished for a specific group of audiants. Additionnally he should have learned how to give his presentation and defend it.
Exams	Individual exams
Lecture Seminar	
Internal number	MKIB6314
Lecturer	Alle Dozenten
Scope	5 ECTS points, 5 Contact hours
Type/mode	Seminar
Language of instruction	German
Content	Each participant of the seminar creates under the guidance of a supervising faculty staff a written report in housework. The contents of the report should be computer science related. Based on the report suitable presentation techniques (slides, video sequences, programmed examples) are selected. Each participant individually presents his report followed by a discussion. The seminar topics are classified into thematic groups. Besides the technical problem the student has to learn how to do 'self-marketing'. The assessment of the student is based on the following criteria: degree of difficulty, quality of written preparation; didactically skillful presentation.
Recommended reading	Depends on the topic
Exams	Homework 1 Semester (not graded)
Comments	Meetings with the faculty supervisor; eventually experimental studies, literature refurbishment; presenting the work-out; defend the own presentation; active participation in discussing the presentations of others.
Lecture Presentation	
Internal number	MKIB6324
Lecturer	Alle Dozenten
Scope	1 ECTS points, 1 Contact hours
Type/mode	Seminar
Language of instruction	German

Content	A students creates under the guidance of a supervising faculty staff the topic, prepared in IB631. He should learn how to construct a presentation, tailored to an specific group of audiants. Additionally he/she has to give his presentation and successfully defend it in a discussion with the audience He presents his content individually in the context of a lecture with an closing discussion. Besides the technical problem the student has to learn how to do 'self-marketing'. The assessment of the student is based on the following criteria: compliance with the requirements of time, didactically skillful presentation, discussion strength.
Recommended reading	Depends on the topic
Exams	Verbal Exam 20 Min. (graded)
Comments	Presenting the work-out; defend the own presentation; active participation in discussing the presentations of others.

Module Key Qualification	
Internal number	MKIB6404
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	6 ECTS points, 6 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Sprachkompetenz
Pre-requisites according to the examination regulations	Modul Internship
Competences	The job marked has an increased demand for graduates with certain key skills. In the context of globalization the most important skills are the ability to communicate with people of other culture groups and basic knowledge of laws to write contract documents. The third important capability the students will learn is a good self-manifestation to present their work results in an optimal manner.
Exams	Individual exams
Lecture Intercultural Communication	
Internal number	MKIB6414
Lecturer	Prof. Dr. Andrea Cnyrim
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	English
Content	- Central aspects of intercultural communication (e.g. cultural determined standards, behaviors, values, verbal and non verbal communication) with special interest in differences between object oriented cultures such as Germany and relationship-oriented cultures such as China and India - Influence of different cultural standards on international business relations (e.g. Business preparation, negotiations, personnel management, decision making, conflict resolution etc.) - Empirical investigations (e.g. Geert Hofstede, Fons, Trompenaars etc.) - Case studies from different cultural areas (e.g. Germany, France, the USA, Japan, China, India etc.)
Recommended reading	PowerPoint slides, exercises, continuative information on the Web side of this lecture
Exams	Exercise 1 Semester (not graded)
Comments	Lectures and practical exercises
Lecture Presentation techniques	
Internal number	MKIB6424
Lecturer	Dr. Martin Holzer
Scope	2 ECTS points, 2 Contact hours
Type/mode	Exercise

Language of instruction	German
Content	To exist in the political, social, economical and cultural living nowadays the students must be able to held speeches and to participate in discussions without stoppages. This seminar shows how to express oneself independently of a concrete text.
Recommended reading	PowerPoint slides
Exams	Verbal Exam 20 Min. (graded)
Comments	Lectures and practical exercises
Lecture Law	
Internal number	MKIB6434
Lecturer	RA Karin Bähr
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	- Introduction to the right - That "Bürgerliches Gesetzbuch” (BGB) - The "Handelsgesetzbuch” (HGB) - The judicial procedure

Module Elective courses 2	
Internal number	MKIB6504
Coordinator	Prof. Dr.-Ing. Holger Vogelsang
Scope	8 ECTS points, 8 Contact hours
Placement	6th Semester
Pre-requisites with regard to content	Praxistätigkeit, Praxisvor- und -nachbereitung
Pre-requisites according to the examination regulations	Modul Internship
Competences	The student should be able to lay his emphasis on individual interests.
Exams	Individual exams
Lecture Practical SAT Solving and Automated Planning	
Internal number	
Lecturer	Dr. Tomas Balyo
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	English
Content	The course offers an introduction to the methods and techniques used in Boolean Satisfiability (SAT) solving and Aautomated Planning. The students will learn how to use SAT solvers and automated planners and also how they work. The topics covered in the lecture include: - Practical applications of SAT solving - The DPLL/CDCL algorithm and how they are implemented - Local search SAT solving algorithms - Encoding problems as SAT problems and selecting the proper SAT solver - Applications of automated planning - Formalization of planning problems and the PDDL language - Basic state space search algorithms (forwards/backwards search) - Heuristic search algorithms and planning heuristics - Satisfiability based planning - Hierarchical task network planning - classical scheduling approaches - constraint-based scheduling - planning for virtual agents in computer games Ziele: - The students will be able to model various problems as SAT or as planning tasks in the PDDL language and solve them using off-the-shelf solvers. - The students will understand the approaches used in SAT solving and automated planning algorithms, which will allow them to efficiently model and solve real world problems by selecting the proper tools for the given task.

Content	TERP10: SAP ERP - Integration of Business Processes is a 10-day training course held at the universities participating in the pilot project. The students learn how the fundamental integrative business processes in procurement, production, planning, project management, sales, customer service, asset management, financial accounting, human resources, and analytics interact within the SAP ERP application. The course provides students with a broad basic knowledge of the core business processes, business interrelations, and integration of business processes in SAP ERP. At the end of the course, students take a certification examination. If they pass the examination, they receive an SAP certificate, which is a fully recognized qualification in the industry.

Language of instruction	German
Content	The course focuses on fundamental object-oriented design methods with an emphasis on design patterns and model driven concepts. The students learn to recognize, to know when to use, and to apply design patterns in varying situations in the context of an evolutionary development process. Furthermore the ability of an axiomatic rule base application of patterns, within a model driven approach, are discussed.

Exams	Presentation 20 Min. (graded)
Comments	The lecture will take the form of seminars with exercises.

Lecture Teamteaching

Internal number	I W730
Lecturers	Alle Dozenten Prof. Dr.-Ing. Holger Vogelsang
Scope	2 ECTS points, 2 Contact hours

Type/mode	Project Lecture
Language of instruction	German
Content	
Recommended reading	
Exams	Verbal Exam 20 Min. (graded)
Comments	- Preparation of a tutorial, support of student groups - Organisation of events
Lecture Multimedia (Blended Learning)	
Internal number	I W774
Lecturer	Prof. Dr. Peter Henning
Scope	2 ECTS points, 2 Contact hours
Type/mode	Project Lecture
Language of instruction	German
Content	
Recommended reading	Book: Henning, Taschenbuch Multimedia.
Exams	Online Test 4 Parts (graded)
Comments	
Lecture Reinforcement Learning	
Internal number	I W775
Lecturer	Prof. Dr. Patrick Baier
Scope	2 ECTS points, 2 Contact hours
Type/mode	Lecture
Language of instruction	German
Content	
Recommended reading	
Exams	Written/verbal Exam 90/20 Min. (graded)

Lecture Social commitment	
Internal number	I W776
Lecturer	Prof. Dr.-Ing. Holger Vogelsang
Scope	2 ECTS points, 2 Contact hours
Type/mode	Hands-on Experience
Language of instruction	German

Content	This course enables students to obtain ECTS credits for social work done at Karlsruhe University of Applied Sciences. The activity must be closely coordinated with a professor of the faculty. This can be, for example, support for the O-Phase or support for visually impaired students. In the case of the O-Phase, you will usually have to work on two semesters in order to achieve the required minimum number of hours. If you are interested, you can also obtain the "Certificate of International and Intercultural Competence (CIIC)". It certifies the intercultural competences and foreign language skills acquired during the degree programme, provides evidence of study-related experiences abroad and lists the framework in which the participants have been involved in intercultural activities. To earn the CIIC, you must cover three of four subject areas. The main component in subject area 1 is the voluntary commitment of at least 50 hours (about 2 hours per week in one semester), which can be completed in institutions or projects with an international and/or intercultural connection. In addition to the commitment, you will attend an introductory event as well as a reflection workshop and prepare an experience report, which is necessary to pass the subject area. If you have any questions about the certificate, please contact the Center of Competence: https://www.h-ka.de/ciic Through the Center of Competence, it is also possible to obtain the "Certificate for Social Engagement (ZGE)". It takes into account an even wider range of opportunities to get involved. Find your suitable area, whether it is community, social, cultural or ecological engagement. Your social engagement should comprise at least 100 time hours and last for at least one year. In addition to your commitment, you will attend various seminars from the Studium Generale (a total of 8 ECTS) to link your practical experience with theoretical knowledge. This certificate cannot be recognised as an elective subject. You can find more information here: https://www.h-ka.de/zge At regular intervals, the Center of Competence offers introductory events and reflection workshops for HKA students who are involved in voluntary work outside of their studies. This gives them the opportunity to exchange their experiences as volunteers with other participants and learn to reflect on and classify the insights they have gained. The next dates can be found on the CIIC website.

Module Scientific Working	
Internal number	MKIB7204
Coordinator	Prof. Dr. Heiko Körner
Scope	5 ECTS points, 2 Contact hours
Placement	7th Semester
Pre-requisites with regard to content	Kommunikationskompetenz, Praxistätigkeit
Pre-requisites according to the examination regulations	Modul Internship
Competences	
Exams	Individual exams
Lecture Scientific Working	
Internal number	MKIB7214
Lecturer	Alle Dozenten
Scope	5 ECTS points, 2 Contact hours
Type/mode	Hands-on Experience
Language of instruction	German
Content	Methods of scientific work in computer science, usage of academic literature (investigation, evaluation, citation), writing a scientific thesis (formulation of the subject, way of looking at a problem, structuring, quality assurance)
Recommended reading	Documentation for structuring the thesis and citations Literature: - "Informatik-Handbuch" von Peter Rechenberg, Gustav Pomberger, Hanser Fachbuch, 2006, ISBN: 3446218424 - "Die schriftliche Arbeit - kurz gefasst" von Jürg Niederhauser, Bibliographisches Institut, Mannheim, 2006, ISBN: 3411042346
Exams	Exercise 1 Month (not graded)
Comments	Self-dependent introduction into the subject, structuring the work and discussion with a lecturer

Module Thesis	
Internal number	MKIB7304
Coordinator	Prof. Dr. Heiko Körner
Scope	12 ECTS points, 0 Contact hours
Placement	7th Semester
Pre-requisites with regard to content	Betriebssysteme, Betriebswirtschaftslehre und IT-Service-Management, Computergrafik und Computer Vision, Datenbanken und Kommunikationsnetze 1, Datenbanken und Kommunikationsnetze 2, Informatik 1, Informatik 2, Kommunikationskompetenz, Mathematik 1, Mathematik 2, Mediengestaltung, Medienprojekt 1, Medienprojekt 2, Medientechnik, Mensch-Maschine-Kommunikation 1, Mensch-Maschine-Kommunikation 2, Praxistätigkeit, Praxisvor- und -nachbereitung, Projektarbeit, Schlüsselkompetenzen, Softwareengineering und Verteilte Systeme, Softwareprojekt, Sprachkompetenz, Technologien des Internets, Wissenschaftliches Arbeiten
Pre-requisites according to the examination regulations	Modul Internship
Competences	During the thesis phase the individual will demonstrate that s/he has the basic knowledge and ability to solve a complex practical problem or work on a research project in a specific timeframe using the scientific method, research in the specific field of interest. The student will be required to structure the problem, conduct the research, and develop a solution using PERT principles. The student will be required to orally present and defend the results.
Exams	Individual exams
Lecture Thesis	
Internal number	MKIB7314
Lecturer	Alle Professoren
Scope	12 ECTS points, 0 Contact hours
Type/mode	Thesis
Language of instruction	German
Content	The thesis may address any subject within the field of computer science and will be defined by the subject agreed upon by the student and the advisor.
Recommended reading	
Exams	Bachelor Thesis 4 Months (graded)
Comments	All work will be individual work and will include basic literature research, system analysis, coding, documentation, and oral presentation.

Module Final Examination	
Internal number	MKIB7404
Coordinator	Prof. Dr. Heiko Körner
Scope	3 ECTS points, 0 Contact hours
Placement	7th Semester
Pre-requisites with regard to content	Abschlussarbeit, Betriebssysteme, Betriebswirtschaftslehre und IT-Service-Management, Computergrafik und Computer Vision, Datenbanken und Kommunikationsnetze 1, Datenbanken und Kommunikationsnetze 2, Informatik 1, Informatik 2, Kommunikationskompetenz, Mathematik 1, Mathematik 2, Mediengestaltung, Medienprojekt 1, Medienprojekt 2, Medientechnik, Mensch-Maschine-Kommunikation 1, Mensch-Maschine-Kommunikation 2, Praxistätigkeit, Praxisvor- und -nachbereitung, Projektarbeit, Schlüsselkompetenzen, Softwareengineering und Verteilte Systeme, Softwareprojekt, Sprachkompetenz, Technologien des Internets, Wissenschaftliches Arbeiten
Pre-requisites according to the examination regulations	Modul Internship
Competences	The students are able to present their work and the results gained in front of a skilled audience. The students show students their abilities to apply interdisciplinary knowledge to a given problem.
Exams	Individual exams
Lecture Final examination	
Internal number	MKIB7414
Lecturer	Alle Professoren
Scope	3 ECTS points, 0 Contact hours
Type/mode	Colloquium
Language of instruction	German
Content	The student has to apply different fields of computer science to find a solution for a given problem.
Recommended reading	
Exams	Verbal Exam 20 Min. (not graded)
